Improving Nutritional Outcomes Vandana Prasad, Arti Ahuja, 2025-12-16 This book engages with the critical issue of nutrition and its relationship with the full spectrum of human development challenges in India. It examines concerns around both undernutrition and overnutrition through a range of case studies documenting key interventions and strategies implemented by governments, NGOs and other stakeholders. The book broadly discusses macroeconomic and social issues affecting India's progress in addressing nutrition challenges, linking them to meso and micro level factors from food and health systems to grassroots realities. It explores not only policy imperatives but more importantly the processes and mechanisms necessary to achieve them. Special attention is given to the role of women and women's collectives, the importance of comprehensive decentralized and community based approaches to improving nutrition among the most vulnerable and the critical life phases that require targeted interventions. The volume also presents large scale state led and statewide models and strategies offering valuable insights for policymakers, governments and institutions grappling with similar issues. Part of the Innovations Practice and the Future of Public Policy in India series, this open access volume will interest policy professionals, administrators, academics and researchers working in public health, nutrition and dietetics, allied health, health and social care, health and development, public policy, social policy and South Asian studies. **Research**

Advances of Modification and Nutrition Properties of Food Carbohydrates, volume I Yanjun Zhang, Jianhua Xie, Bin Li, Srinivas Janaswamy, 2023-10-20 As a group of important biopolymers, carbohydrates exist widely in living organisms and play many known and unknown biological roles in life activities via different pathways. Traditionally, carbohydrate polymers, e.g. starch, pectin, polysaccharide and dietary fiber, are widely applied in industrial applications, e.g. pharmaceuticals, food, staff, biofuels and biomaterials, and a growing understanding and deeper investigation of food carbohydrates are driving the development of natural carbohydrates for novel applications, especially for the treatment of chronic diseases, e.g. hyperlipidemia, obesity and diabetes. In recent years, the gut microbiota has been considered an important organ and plays a critical role in host health and diseases, and emerging evidence indicates that food carbohydrates are effective for the modulation of gut microbiota. In addition, the modification of carbohydrate polymers could alter or enhance their nutrition properties, which may extend their applications. Notably, the nutrition properties of carbohydrate polymers are dependent on their chemical structures and chain conformations, and thus the structural identification of carbohydrate polymers and their derivatives is helpful for their development and application in the food and pharmaceutical fields. **Nutrition Abstracts and Reviews**, 1995
