Pfenninger,David Singleton,2017-04-21 This book constitutes a holistic study of how and why late starters surpass early starters in comparable instructional settings Combining advanced quantitative methods with individual level qualitative data it examines the role of age of onset in the context of the Swiss multilingual educational system and focuses on performance at the beginning and end of secondary school thereby offering a long term view of the teenage experience of foreign language learning The study scrutinised factors that seem to prevent young starters from

profiting from their extended learning period and investigated the mechanisms that enable late beginners to catch up with early beginners relatively quickly Taking account of contextual factors individual socio affective factors and instructional factors within a single longitudinal study the book makes a convincing case that age of onset is not only of minimal relevance for many aspects of instructed language acquisition but that in this context for a number of reasons a later onset can be beneficial   *Neural Networks for Identification, Prediction, and Control* D. T. Pham,1995 This publication describes examples of applications of neural networks in modelling prediction and control Topics covered include identification of general linear and nonlinear processes forecasting of river levels stock market prices currency exchange rates and control of a time delayed plant and a two joint robot The neural network types considered are the multilayer perceptron MLP the Elman and Jordan networks the Group Method of Data Handling GMDH the cerebellar model articulation controller CMAC networks and neuromorphic fuzzy logic systems The algorithms presented are the standard backpropagation BP algorithm the Widrow Hoff learning dynamic BP and evolutionary learning Full listings of computer programs written in C for neural network based system identification and prediction to facilitate practical experimentation with neural network techniques are included
