Duda, 2004-06-04 The first edition published in 1973 has become a classic reference in the field Now with the second edition readers will find information on key new topics such as neural networks and statistical pattern recognition the theory of machine learning and the theory of invariances Also included are worked examples comparisons between different methods extensive graphics expanded exercises and computer project topics An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department *Handbook of Perception and Action* Herbert Heuer, Steven W. Keele, 1996-04-19 This up to date handbook focuses on the study of action or motor control which examines movement and skill and the internal processes that lead to them As action is interrelated with cognition this is a vigorous field of investigation Written by international experts *Motor Skills* provides current reviews on general processes important to motor control learning coordination timing planning and control and on the individual skills of throwing catching reaching and typing The text describes important conceptual and methodological advances regarding control theory and timing and is divided into two sections which analyze skill from the perspectives of general processes and individual skills **Machine Learning in Document Analysis and Recognition** Simone Marinai, Hiromichi Fujisawa, 2007-12-27 The objective of Document Analysis and Recognition DAR is to recognize the text and graphical components of a document and to extract information With first papers dating back to the 1960's DAR is a mature but still growing research field with consolidated and known techniques Optical Character Recognition OCR engines are some of the most widely recognized products of the research in this field while broader DAR techniques are nowadays studied and applied to other industrial and office automation systems In the machine learning community one of the most widely known search problems addressed in DAR is recognition of unconstrained handwritten characters which has been frequently used in the past as a benchmark for evaluating machine learning algorithms especially supervised classifiers However developing a DAR system is a complex engineering task that involves the integration of multiple techniques into an organic framework A reader may feel that the use of machine learning algorithms is not appropriate for other DAR tasks than character recognition On the contrary such algorithms have been massively used for nearly all the tasks in DAR With large emphasis being devoted to character recognition and word recognition other tasks such as pre processing layout analysis character segmentation and signature verification have also benefited much from machine learning algorithms *Forthcoming Books* Rose Arny, 2003-04 **Subject Guide to Books in Print**, 1991 *Fuzzy Logic and Neural Network Handbook* Chi-hau Chen, 1996 A practical reference that presents concise and comprehensive reports on the major activities in fuzzy logic and neural networks with emphasis on the applications and systems of interest to computer engineers Each of the 31 chapters focuses on the most important activity of a specific topic and the chapters are organized into three parts principles and algorithms applications and architectures and

systems The applications for fuzzy logic include home appliance design and manufacturing process those for neural networks include radar sonar and speech signal processing remote sensing and electrical power systems Annotation copyright by Book News Inc Portland OR
