Tarasov, 2020-06-03 This book is devoted to the application of fractional calculus in economics to describe processes with memory and non locality Fractional calculus is a branch of mathematics that studies the properties of differential and integral operators that are characterized by real or complex orders Fractional calculus methods are powerful tools for describing the processes and systems with memory and nonlocality Recently fractional integro differential equations have been used to describe a wide class of economical processes with power law memory and spatial nonlocality Generalizations of basic economic concepts and notions the economic processes with memory were proposed New mathematical models with continuous time are proposed to describe economic dynamics with long memory This book is a collection of articles reflecting the latest mathematical and conceptual developments in mathematical economics with memory and non locality based on applications of fractional calculus *The Austro-Libertarian Point of View* Alan G. Futerman, Walter E. Block, 2021-11-01 This book covers several areas of economic theory and political philosophy from the perspective of Austrian Economics and libertarianism As such it deals with Epistemology and Methodology Microeconomics Macroeconomics Labor Economics International Economics Political Philosophy Law and Public Policy all from the Austro libertarian perspective Hence this book offers an integrated view of libertarianism and Austrian economics in the light of recent debates in the areas of economic science and political philosophy Moreover it builds from the foundations of the Austrian approach epistemology and methodology while the latter material deals with its application to the individual from the microeconomic perspective which in turn allows an exploration of subjects in macroeconomics Additionally this work applies Austro libertarianism to law politics and public policy Thus it offers a unified view of the entire approach in a logical progression allowing the readers to judge this perspective in full Futerman and Block say that their book is not a manual which I suppose it is not But it is a collection of highly pertinent essays from which you can understand what is mistaken in the orthodoxy of economics law and politics The central term of art in Austrian economics is that phrase human action It is the exercise of human will not the blind bumping of one molecule against another or one organism against another as in the physical sciences Futerman and Block distinguish Austrian economics as a scientific enterprise based on liberty of the will from libertarianism as an advocacy based on policies implied by such liberty Although Austrian economics is positive and libertarianism is normative they write this book shows how both are related how each can support the other Indeed they do Deirdre N McCloskey PhD UIC

Emerita University of Illinois at Chicago      **Multi-Market Antitrust Economics** Scott Gilbert, 2017-12-01 Antitrust economics is a field that draws extensively on the economic theory of industrial organization and the field's frontier is at the cutting edge of economic research This book bridges the gap between introductory texts and advanced research volumes by presenting select themes in antitrust economics and modeling All from a neoclassical perspective the author begins by discussing classic monopoly continues to add more markets to the mix via spillover effects and horizontal vertical mergers and then explores logical ties to international trade and regulated industries While brief and selective the method provides a basic analytical reference point for approaching special antitrust topics not covered here such as tying bundling and exclusive dealing Such analytics are sometimes likened to a rational defense of monopoly and related anti competitive behavior but are essential to explicating antitrust economics from a mainstream Western economic vantage

**Segmentation of Hand Bone for Bone Age Assessment** Yan Chai Hum, 2013-05-25 The objective of this Brief is to provide a solution to the unsolved technical problem in segmentation for the automated bone age assessment system The task is accomplished by first applying the modified histogram equalized module then applying the proposed automated anisotropic diffusion technique It is followed by a novel fuzzy quadruple division scheme to optimize the central segmentation algorithm and then an additional quality assurance scheme The designed segmentation framework works without demanding scarce resources such as training sets and skillful operators The results have shown that the designed framework is capable of separating the soft tissue and background from the hand bone with high accuracy This Brief should be especially useful for students and professional researchers in the Biomedical and image processing fields      **Microeconomic Theory: Basic Principles and Extensions** Walter Nicholson, 1972

Stapleton, 2005      *Redesigning Petroleum Taxation* Emre Üşenmez, 2018-10-15 Since its inception some 40 years ago petroleum specific taxation in the UK has been subject to numerous modifications. Often these modifications were brought into place not only to sufficiently incentivise the investors but also to capture a fair share for the government. However it is evident from the frequency of changes that finding the right balance between these two aims is no easy matter. Such a balance and the consequent fiscal stability is necessary for the long term relationship between the parties to endure to their mutual benefit. Still it does not take much for one or other party to feel that they are out of balance. As a consequence one party feels that the other party is taking an undue proportion of the value generated and that they are losing out. Yet achieving that balance and fiscal stability is possible. To understand this possibility this book first clarifies what is meant by sufficient incentivisation and fair share before developing a new fiscal system that manages this balance and stability. Such clarification yields objective criteria against which to assess not only the existing regime but also the newly proposed regime. This approach is further complemented by the critical analysis of the fiscal legislative framework and the evaluation of the legal positions of specific contractual elements and mechanisms found within that framework. This latter analysis is important in order to reduce the legal uncertainty such elements may create which can otherwise lead to further reactive amendments and revisions to the fiscal regime in the future.
