Weekly Government Abstracts ,1989 *Electric Drive System Design for Electric Vehicles* Yunqi Zheng,2025-12-01 Electric Drive System Design for Electric Vehicles bridges the gap between specialized research on electric vehicle EV electric drive system design principles and developing industry driven solutions It addresses best practices for ensuring the performance and reliability of EV electric drive systems including battery motor and power electronic components Based on the author s hands on experience the book takes a multidisciplinary approach to EV drive system design combining electrical engineering thermal design mechanical engineering and manufacturing expertise to deliver efficient reliable and high performance solutions It includes case studies and practical examples from the industry reviewing state of the art electric system technologies in current EVs such as Lucid Tesla Chevrolet VW Nissan and more Readers will also obtain insight into how fundamental physics plays a critical role in those technological advancements and innovations This book will benefit academic researchers and graduate students studying power electronic packaging and electric drive systems It will also serve industry professionals involved in EV design and general power electronic system packaging **Handbook of Travel Behaviour** Dimitris Potoglou,Justin Spinney,2024-04-12 This insightful Handbook offers a comprehensive and diverse understanding of the determinants of travel behaviour looking at the ways in which it can be better understood modelled and forecasted Dimitris Potoglou and Justin Spinney bring together an international range of esteemed academics who explore the origins of the field research analysis methods environmental considerations and social factors This title contains one or more Open Access chapters *Energy Sustainability through Retail Electricity Markets* John Collins,Wolfgang Ketter,Andreas L. Symeonidis,2023-11-14 The world is moving away from demand driven electricity markets supplied by centralized generation and distribution of fossil fuel produced electricity Increasing reliance on weather dependent renewable sources will require a shift toward a supply driven paradigm while beneficial electrification including widespread adoption of electric vehicles heat pumps and batteries will offer considerable but widely distributed demand flexibility that can be used to compensate for supply variability The open source Power Trading Agent Competition Power TAC platform simulates a decentralized future modeling the high complexity of future retail electricity markets This book describes a variety of approaches to profitable trading in realistic wholesale and retail electricity markets It presents actionable insights from extensive exploration of policies and business models for retail electricity markets gained from a decade of Power TAC tournaments and from research inspired by the Power TAC experience Featuring contributions from tournament designers competitors and scientists combining best practices from computer science and economics and management science this book is of benefit to academics researchers practitioners and policy makers in sustainable energy and wholesale and retail electricity markets *Driving Sustainability through Engineering Management and Systems Engineering* Simon P. Philbin,2021-09-08 Despite the ongoing impact of the COVID 19 pandemic the challenge of realizing sustainability across the triple bottom line of social environmental and economic development remains an urgent priority If

anything it is now imperative that we work towards achieving the United Nations Sustainable Development Goals SDGs. However, the global challenges are significant. Many of the societal challenges represent complex problems that require multifaceted solutions drawing on multidisciplinary approaches. Engineering management involves the management of people and projects related to technological or engineering systems; this includes project management, engineering economy, and technology management, as well as the management and leadership of teams. Systems engineering involves the design, integration, and management of complex systems over the full life cycle; this includes requirements capture and integrated system design, as well as modelling and simulation. In addition to the theoretical underpinnings of both disciplines, they also provide a range of tools and techniques that can be used to address technological and organisational complexity. The disciplines of engineering management and systems engineering are therefore ideally suited to help tackle both the challenges and the opportunities associated with realising a sustainable future for all. This book provides new insights on how engineering management and systems engineering can be utilised as part of the journey towards sustainability. The book includes a discussion of a broad range of different approaches to investigate sustainability through utilising quantitative, qualitative, and conceptual methodologies. The book will be of interest to researchers and students focused on the field of sustainability, as well as practitioners concerned with devising strategies for sustainable development. *Harper's Weekly*

Transportation and Power Grid in Smart Cities, Hussein T. Mouftah, Melike

Erol-Kantarci, Mubashir Husain Rehmani, 2018-12-28. With the increasing worldwide trend in population migration into urban centers, we are beginning to see the emergence of the kinds of mega cities which were once the stuff of science fiction. It is clear to most urban planners and developers that accommodating the needs of the tens of millions of inhabitants of those megalopolises in an orderly and uninterrupted manner will require the seamless integration of and real time monitoring and response services for public utilities and transportation systems. Part speculative look into the future of the world's urban centers, part technical blueprint, this visionary book helps lay the groundwork for the communication networks and services on which tomorrow's smart cities will run. Written by a uniquely well qualified author team, this book provides detailed insights into the technical requirements for the wireless sensor and actuator networks required to make smart cities a reality.
