Multiresolution Image Processing And Analysis Springer Series In Information Sciences:

Multiresolution Image Processing and Analysis A. Rosenfeld, 2013-03-09 This book results from a Workshop on Multiresolution Image Processing and Analysis held in Leesburg VA on July 19-21, 1982. It contains updated versions of most of the papers that were presented at the Workshop as well as new material added by the authors. Four of the presented papers were not available for inclusion in the book: D. Sabbah, A computing with connections approach to visual recognition; R. M. Haralick, Fitting the gray tone intensity surface as a function of neighborhood size; E. M. Riseman, Hierarchical boundary formation; and W. L. Mahaffey, L. S. Davis and J. K. Aggarwal, Region correspondence in multi-resolution images taken from dynamic scenes. The number and variety of papers indicates the timeliness of the Workshop. Multiresolution methods are rapidly gaining recognition as an important theme in image processing and analysis. I would like to express my thanks to the National Science Foundation for their support of the Workshop under Grant MCS 82-05942 to Barbara Hope for organizing and administering the Workshop to Janet Salzman and Fran Cohen for retyping the papers and above all to the speakers and other participants for making the Workshop possible.

An Introduction to Wavelets Charles K. Chui, 2016-06-03 Wavelet Analysis and its Applications Volume 1. An Introduction to Wavelets provides an introductory treatise on wavelet analysis with an emphasis on spline wavelets and time frequency analysis. This book is divided into seven chapters. Chapter 1 presents a brief overview of the subject including classification of wavelets, integral wavelet transform for time frequency analysis, multi-resolution analysis highlighting the important properties of splines and wavelet algorithms for decomposition and reconstruction of functions. The preliminary material on Fourier analysis and signal theory is covered in Chapters 2 and 3. Chapter 4 covers the introductory study of cardinal splines while Chapter 5 describes a general approach to the analysis and construction of scaling functions and wavelets. Spline wavelets are deliberated in Chapter 6. The last chapter is devoted to an investigation of orthogonal wavelets and wavelet packets. This volume serves as a textbook for an introductory one semester course on wavelet analysis for upper division undergraduate or beginning graduate mathematics and engineering students.

Medical Imaging Systems Technology: Methods in general anatomy Cornelius T. Leondes, 2005 This scholarly set of well harmonized volumes provides indispensable and complete coverage of the exciting and evolving subject of medical imaging systems. Leading experts on the international scene tackle the latest cutting edge techniques and technologies in an in-depth but eminently clear and readable approach. Complementing and intersecting one another, each volume offers a comprehensive treatment of substantive importance to the subject areas. The chapters in turn address topics in a self-contained manner with authoritative introductions, useful summaries and detailed reference lists. Extensively well illustrated with figures throughout the five volumes as a whole.
