Technologies and Engineering Systems (ICITES2014) Jengnan Juang, 2015-11-12 This book includes the original peer
reviewed research from the 3rd International Conference on Intelligent Technologies and Engineering Systems ICITES2014
held in December 2014 at Cheng Shiu University in Kaohsiung Taiwan Topics covered include Automation and robotics fiber
optics and laser technologies network and communication systems micro and nano technologies and solar and power systems
This book also Explores emerging technologies and their application in a broad range of engineering disciplines Examines
fiber optics and laser technologies Covers biomedical electrical industrial and mechanical systems Discusses multimedia
systems and applications computer vision and image video signal processing **Unmanned Aircraft Design** Mohammad
H. Sadraey, 2024-09-07 This book provides fundamental principles design procedures and design tools for unmanned aerial
vehicles UAVs with three sections focusing on vehicle design autopilot design and ground system design The design of
manned aircraft and the design of UAVs have some similarities and some differences They include the design process
constraints e g g load pressurization and UAV main components autopilot ground station communications system sensors and
payload A UAV designer must be aware of the latest UAV developments current technologies know lessons learned from past
failures and they should appreciate the breadth of UAV design options The contribution of unmanned aircraft continues to
expand every day and over 67 countries are developing and employing UAVs for both military and civil scientific purposes A
UAV system is much more than a reusable air vehicle or vehicles UAVs are air vehicles they fly like airplanes and operate in
an airplane environment They are designed like air vehicles they have to meet critical air vehicle requirements A designer
needs to know how to integrate complex multi disciplinary systems and to understand the environment the requirements and
the design challenges and this book is an excellent overview of the fundamentals from an engineering perspective This book
is meant to meet the needs of newcomers into the world of UAVs The materials are intended to provide enough information
in each area and illustrate how they all play together to support the design of a complete UAV Therefore this book can be
used both as a reference for engineers entering the field or as a supplementary text for a UAV design course to provide
system level context for each specialized topic The second edition is extensively revised Some of the new terminologies
concepts and specific unmanned aircraft systems are introduced The revisions make the book clearer and easier to
understand and will add number of new subjects in areas that have become more prominent in the unmanned aviation world
