recommend this book Philip Rehbock author of *Philosophical Naturalists Themes in Early Nineteenth Century British Biology*  
 By focusing on the experiences of British naturalists in China during a time when it was gradually being opened up to foreign  
 influences Fan makes at least two important contributions to history of science He gives us an authoritative study of British  
 naturalists in China as far as I know the only one of its kind and he forces us to rethink some of our categories for doing  
 history of science including how we conceive of the relationship between science and imperialism and between Western  
 naturalist and native Fan s scholarship is meticulous with careful attention to detail and his prose is clear controlled and  
 succinct Bernard Lightman editor of *Victorian Science in Context* *Critical Survey of Short Fiction* ,2001 **Comfort**

 Britain and Ireland explaining the reasons it was introduced and why it became ubiquitous in the archipelagos of northwest  
 Europe Sitka spruce has contributed to the Pacific Coast landscapes of North America for over ten millennia For the Tlingit  
 First Nation it is the most important tree in terms of spiritual relationships art and products in daily use such as canoes  
 containers fish traps and sweet cakes Since the late nineteenth century it has also been the most important tree to the timber  
 industry of west coast North America The historical background to the modern use of Sitka spruce is explored The lack of  
 cultural reference may explain negative public response when treeless uplands in the UK and Ireland were afforested with  
 introduced conifer species particularly Sitka spruce following two World Wars The multipurpose forestry of today recognizes  
 that Sitka spruce is the most important tree to the timber industry and to a public which uses its many products but fails to  
 recognize the link between growing trees and bought goods The apparently featureless and wildlife less Sitka spruce  
 plantations in UK uplands are gradually developing recognizable ecological features Sitka spruce has the potential to form  
 temperate rain forests this century as well as to produce much needed goods for society The major contribution of Sitka  
 spruce to landscapes and livelihoods in western North America is by contrast widely accepted But conserving natural old  
 growth forests sustaining the needs of First Nations and producing materials for the modern timber industry will be an  
 intricate task *Scientific American* ,1881 Monthly magazine devoted to topics of general scientific interest **The**
