Mathematics and Philosophy at the Turn of the First Millennium Clelia V. Ciralessi, 2025-03-31 At the turn of the first millennium scientific and philosophical knowledge was far from dormant Arithmetic with its diverse calculation techniques and number theory served as a bridge to philosophy theology and the study of the physical world Even something as simple as a series of multiplication tables could unlock a profound knowledge of both the divine realm and natural phenomena Such is the case with Abbo of Fleury s Commentary on the Calculus Mathematics and Philosophy at the Turn of the First Millennium sheds light on Abbo s original philosophical system anchored in two central doctrines which serve as a compass to navigate it the theory of unity henology and the theory of composition Yet the Commentary on the Calculus covers much more The present study thus explores an eclectic range of topics from water clocks to barleycorns constellations to human voice synodic month to the human lifespan and numbers to God Abbo s work is an ambitious attempt to tie together the study of both the visible and invisible realms what can be measured and what cannot what can be quantified and what exceeds quantification Scholars and students of the history of philosophy and mathematics will be introduced to a pivotal figure from an often overlooked era They will be provided with fresh insights into the spread of Neopythagorean doctrines in the early Middle Ages as they learn how these ideas were transmitted through arithmetic texts and harmonised with theology and natural philosophy They will also get to know the medieval fraction system and calculus practices *The Millennium Prize Problems* James Carlson, Arthur Jaffe, Andrew Wiles, 2023-09-14 On August 8 1900 at the second International Congress of Mathematicians in Paris David Hilbert delivered his famous lecture in which he described twenty three problems that were to play an influential role in mathematical research A century later on May 24 2000 at a meeting at the Coll ge de France the Clay Mathematics Institute CMI announced the creation of a US 7 million prize fund for the solution of seven important classic problems which have resisted solution The prize fund is divided equally among the seven problems There is no time limit for their solution The Millennium Prize Problems were selected by the founding Scientific Advisory Board of CMI Alain Connes Arthur Jaffe Andrew Wiles and Edward Witten after consulting with other leading mathematicians Their aim was somewhat different than that of Hilbert not to define new challenges but to record some of the most difficult issues with which mathematicians were struggling at the turn of the second millennium to recognize achievement in mathematics of historical dimension to elevate in the consciousness of the general public the fact that in mathematics the frontier is still open and abounds in important unsolved problems and to emphasize the importance of working towards a solution of the deepest most difficult problems The present volume sets forth the official description of each of the seven problems and the rules governing the prizes It also contains an essay by Jeremy Gray on the history of prize problems in mathematics Why Is There Philosophy of Mathematics At All? Ian Hacking, 2014-01-30 Hacking explores how mathematics became possible for the human race and how it ensured our status as the dominant species **Mathematical Reviews** ,2008 Millennial
