Optical Network Design and Planning Jane M. Simmons, 2014-05-06 This book takes a pragmatic approach to deploying state of the art optical networking equipment in metro core and backbone networks. The book is oriented towards practical implementation of optical network design. Algorithms and methodologies related to routing, regeneration, wavelength assignment, sub rate traffic grooming and protection are presented with an emphasis on optical bypass enabled or all optical networks. The author has emphasized the economics of optical networking with a full chapter of economic studies that offer guidelines as to when and how optical bypass technology should be deployed. This new edition contains new chapter on dynamic optical networking and a new chapter on flexible elastic optical networks. Expanded coverage of new physical layer technology e.g. coherent detection and its impact on network design and enhanced coverage of ROADM architectures and properties including colorless, directionless, contentionless and gridless. Covers hot topics such as Software Defined Networking and energy efficiency, algorithmic advancements and techniques especially in the area of impairment aware routing and wavelength assignment. Provides more illustrative examples of concepts are provided using three reference networks, the topology files for the networks are provided on a web site for further studies by the reader. Also exercises have been added at the end of the chapters to enhance the book's utility as a course textbook.

Optical Network Design and Modeling Anna Tzanakaki, Manos Varvarigos, Raul Muñoz, Reza Nejabati, Noboru Yoshikane, Markos Anastasopoulos, Johann Marquez-Barja, 2020-02-15 This book constitutes the refereed proceedings of the 23rd International IFIP conference on Optical Network Design and Modeling ONDM 2019 held in Athens, Greece in May 2019. The 39 revised full papers were carefully reviewed and selected from 87 submissions. The papers focus on cutting edge research in established areas of optical networking as well as their adoption in support of a wide variety of new services and applications. This involves the most recent trends in networking including 5G and beyond, big data and network data analytics, cloud edge computing, autonomic networking, artificial intelligence assisted networks, secure and resilient networks that drive the need for increased capacity, efficiency, flexibility and adaptability in the functions that the network can perform. In this context, new disaggregated optical network architectures were discussed, exploiting and integrating novel multidimensional photonic technology solutions as well as adopting open hardware and software platforms relying on software defined networking, SDN and network function virtualization, NFV to allow support of new business models and opportunities.

Cross-Layer Design in Optical Networks Suresh Subramaniam, Maïté Brandt-Pearce, Piet Demeester, Chava Vijaya Saradhi, 2013-03-23 This work addresses the topic of optical networks cross layer design with a focus on physical layer impairment aware design.

Contributors captures both the physical layer aware network design as well as the latest advances in service layer aware network design Treatment of topics such as optical transmissions which are prone to signal impairments dense packing of wavelengths dispersion crosstalk etc as well as how to design the network to mitigate such impairments are all covered
