## **Optically Stimulated Luminescence Fundamentals And Applications:**

**Optically Stimulated Luminescence** Eduardo G. Yukihara, Stephen W. S. McKeever, 2011-02-16 Optically stimulated luminescence has developed into one of the leading optical techniques for the measurement and detection of ionizing radiation. This text covers in a readable manner advanced modern applications of the technique how it can play a useful role in different areas of dosimetry and how to approach the challenges presented when working with optically stimulated luminescence. The six chapters are as follows: Introduction including a short history of OSL and details of successful applications; Theory and Practical Aspects; Personal Dosimetry; Space Dosimetry; Medical Dosimetry; Other Applications and Concepts; including retrospective and accident dosimetry; environmental monitoring and UV dosimetry. Throughout the book the underlying theory is discussed on an as needed basis for a complete understanding of the phenomena but with an emphasis of the practical applications of the technique. The authors also give background information and relevant key references on each method inviting the reader to explore deeper into the subject independently. Postgraduates, researchers and those involved with radiation dosimetry will find this book particularly useful. The material is both relevant and accessible for both specialists and those new to the field therefore is fundamental to any academic interested in modern advances of the subject.

[A Course in Luminescence Measurements and Analyses for Radiation Dosimetry](#) Stephen W. S. McKeever, 2022-05-16 A Course in Luminescence Measurements and Analyses for Radiation Dosimetry A complete approach to the three key techniques in luminescence dosimetry. In [A Course in Luminescence Measurements and Analyses for Radiation Dosimetry](#) expert researcher Stephen McKeever delivers a holistic and comprehensive exploration of the three main luminescence techniques used in radiation dosimetry: thermoluminescence, optically stimulated luminescence and radiophotoluminescence. The author demonstrates how the three techniques are related to one another and how they compare to each other. Throughout the author's focus is on pedagogy including state of the art research only where it is relevant to demonstrate a key principle or where it reveals a critical insight into physical mechanisms. The primary purpose of the book is to teach beginning researchers about the three aforementioned techniques their similarities and distinctions and their applications. [A Course in Luminescence Measurements and Analyses for Radiation Dosimetry](#) offers access to a companion website that includes original data sets and problems to be solved by the reader. The book also includes a thorough introduction to the field of luminescence applications in radiation dosimetry including a history of the subject. Comprehensive explorations of introductory models and kinetics including the concepts of thermoluminescence, optically stimulated luminescence and radiophotoluminescence. Practical discussions of luminescence curve shapes including the determination of trapping parameters from experimental thermoluminescence and optically stimulated luminescence data. In-depth examinations of dose response functions superlinearity, supralinearity and sublinearity as well as the causes of non-linearity. Detailed examples with well known materials. Dosimetry is an invaluable guide for undergraduate and graduate students in the field of radiation dosimetry as well as faculty and professionals in the field **Advances In Physics And Applications Of Optically And Thermally Stimulated Luminescence** Reuven Chen, Vasilis Pagonis, 2019-03-06 In this volume international leading experts in the study of thermally and optically stimulated luminescence give an up to date comprehensive coverage of the theoretical and experimental aspects of these subjects as well as their applications The theory of thermoluminescence TL and optically stimulated luminescence OSL are discussed in detail including mainly solid state models of localized and delocalized transitions These models cover the effects occurring during the excitation by irradiation and the read out by heating or by exposure to light The methods described consist of analytical mathematical considerations as well as numerical simulations The main application of these effects namely radiation dosimetry includes personal and environmental dosimetry as well as retrospective dosimetry and the dosimetry of cosmic radiation and space missions Also discussed in detail are archaeological and geological dating the use of luminescence dosimetry in medical physics as well as general applications in geosciences other model subjects such as time resolved luminescence and thermally assisted OSL and the sister subject of thermoluminescence in photosynthetic materials

**An Introduction to Time-Resolved Optically Stimulated Luminescence** Makaiko L Chithambo, 2018-12-18 Time resolved optical stimulation of luminescence has become established as an important method for measurement of optically stimulated luminescence Its enduring appeal is easy to see with the number of materials studied growing from the initial focus on natural minerals such as quartz and feldspar to synthetic dosimeters such as  $\text{Al}_2\text{O}_3$  C  $\text{BeO}$  and  $\text{YAlO}_3$   $\text{Mn}_2$  The aim of time resolved optical stimulation is to separate in time the stimulation and emission of luminescence The luminescence is stimulated from a sample using a brief light pulse The ensuing luminescence can be monitored either during stimulation in the presence of scattered stimulating light or after the light pulse The time resolved luminescence spectrum measured in this way can be resolved into components each with a distinct lifetime The lifetimes are linked to physical processes of luminescence and thus provide a means to study dynamics involving charge transfer between point defects in materials This book is devoted to time resolved optically stimulated luminescence and is suitable for researchers with an interest in the study of point defects using luminescence methods The book first sets the method within the context of luminescence field at large and then provides an overview of the instrumentation used There is much attention on models for time resolved optically stimulated luminescence two of which are analytical and the third of which is based on computational simulation of experimental results To bring relevance to the discussion the book draws on examples from studies on quartz and a  $\text{Al}_2\text{O}_3$  C two materials widely investigated using this method The book shows how kinetic analysis for various thermal effects such as thermal quenching and thermal assistance can be investigated using time resolved luminescence Although use of light sums is an obvious choice for this contemporary work is discussed to show the versatility of using other alternative methods such the dynamic throughput

**Radiation Dosimetry Phosphors** Sanjay J. Dhoble, Vibha Chopra, Vinit

Nayar, George Kitis, Dirk Poelman, Hendrik C. Swart, 2022-05-26 Radiation Dosimetry Phosphors provides an overview of the synthesis properties and applications of materials used for radiation dosimetry and reviews the most appropriate phosphor materials for each radiation dosimetry technique. The book describes the available phosphors used commercially for their applications in the medical field for dose measurements. Although radiation dosimetry phosphors are commercially available continuous efforts have been made by the worldwide research community to develop new materials or improve already existing materials used in different areas with low or high levels of radiation. Moreover researchers are still working on developing dosimetric phosphors for OSL, ML, LL and RPL dosimetry. This book provides an overall view of the phosphors available, low cost synthesis methods, mechanisms involved, emerging trends and new challenges for the development of emerging materials for radiation dosimetry. It is suitable for those working in academia and R&D laboratories in the discipline of materials science and engineering along with practitioners working in radiation and dosimetry. Provides the fundamental concepts, historical context and review of current phosphors available for radiation dosimetry. Reviews low cost material methods to synthesize and characterize rare earth doped inorganic phosphors for different kinds of radiation dosimetry techniques. Discusses key barriers and potential solutions for enabling commercial realization of phosphors for radiation dosimetry applications.

**Scintillation Dosimetry** Sam Beddar, Luc Beaulieu, 2016-04-06 Scintillation Dosimetry delivers a comprehensive introduction to plastic scintillation dosimetry covering everything from basic radiation dosimetry concepts to plastic scintillating fiber optics. Comprised of chapters authored by leading experts in the medical physics community, the book discusses a broad range of technical implementations from point source dosimetry scaling to 3D volumetric and 4D scintillation dosimetry. Addresses a wide scope of clinical applications from machine quality assurance to small field and in vivo dosimetry. Examines related optical techniques such as optically stimulated luminescence (OSL) or Čerenkov luminescence. Thus Scintillation Dosimetry provides an authoritative reference for detailed state of the art information on plastic scintillation dosimetry and its use in the field of radiation dosimetry.

**Optically Stimulated Luminescence Dosimetry** L. Bøtter-Jensen, S. W. S. McKeever, A. G. Wintle, 2003 The various stimulation modes (continuous wave, pulsed or linear modulation) are introduced and compared. The properties of the most important synthetic OSL materials, beginning with the dominant carbon-doped  $\text{Al}_2\text{O}_3$  and moving through discussions of other less well studied but nevertheless important or potentially important materials. The OSL properties of the two most important natural OSL dosimetry material types, namely quartz and feldspars, are discussed in depth. The applications chapters deal with the use of OSL in personal environmental, medical and UV dosimetry, geological dating and retrospective dosimetry, accident dosimetry and dating. Finally, the developments in instrumentation that have occurred over the past decade or more are described. The book will find use in those laboratories within academia, national institutes and the private sector where research and applications in radiation
