Optimal Control Of Greenhouse Cultivation:

Optimal Control of Greenhouse Cultivation Gerrit van Straten, Gerard van Willigenburg, Eldert van Henten, Rachel van Ooteghem, 2010-11-08 Greenhouse control system manufacturers produce equipment and software with hundreds of settings and while they hold training courses on how to adjust these settings there is as yet no integrated instruction on when or why. Despite rapid growth in the greenhouse industry growers are still faced with a multitude of variables and no unifying frame.

Mathematical and Control Applications in Agriculture and Horticulture W. Day, Yasushi Hashimoto, 2014-07-04 This title provides a general overview of recent developments and research into types of systems and their uses in the agricultural and horticultural industry. 64 papers are included containing both theoretical models and applied examples for greenhouse systems, harvesting technology and plant factory systems.

Biosystems Engineering: Biofactories for Food Production in the Century XXI Ramon Guevara-Gonzalez, Irineo Torres-Pacheco, 2014-01-24 This book presents new food production systems for plants and animals involving agrochemicals that increase in a controlled manner the bioactives content under greenhouse conditions. Moreover, conception and design of new instrumentation for precision agriculture and aquaculture contributing in food production is also highlighted in this book.

Day, P. C. Young, 1996 *Modeling and Control of Greenhouse Crop Growth* Francisco Rodríguez, Manuel Berenguel, José Luis Guzmán, Armando Ramírez-Arias, 2014-11-01 A discussion of challenges related to the modeling and control of greenhouse crop growth. This book presents state of the art answers to those challenges. The authors model the subsystems involved in successful greenhouse control using different techniques and show how the models obtained can be exploited for simulation or control design. They suggest ideas for the development of physical and or black box models for this purpose. Strategies for the control of climate and irrigation related variables are brought forward. The uses of PID control and feedforward compensators both widely used in commercial tools are summarized. The benefits of advanced control techniques, event based robust and predictive control for example, are used to improve on the performance of those basic methods. A hierarchical control architecture is developed governed by a high level multiobjective optimization approach rather than traditional constrained optimization and artificial intelligence techniques. Reference trajectories are found for diurnal and nocturnal temperatures, climate related setpoints and electrical conductivity, fertirrigation related setpoints. The objectives are to maximize profit, fruit quality and water use efficiency, these being encouraged by current international rules. Illustrative practical results selected from those obtained in an industrial greenhouse during the last eight years are shown and described. The text of the book is complemented by the use of illustrations, tables and real examples which are helpful in understanding the material. *Modeling and Control of Greenhouse Crop Growth* will be of interest to industrial engineers.

Chandrasekharam, Janusz Piechocki, 2017-08-02 The agri food chain consumes about one third of the world's energy production with about 12% of it for crop production and nearly 80% for processing distribution retail preparation and cooking The agri food chain also accounts for 80-90% of total global freshwater use where 70% alone is for irrigation Additionally on a global scale freshwater production consumes nearly 15% of the entire energy production It can therefore be argued that making agriculture and the agri food supply chain independent from fossil fuel use has a huge potential to contribute to global food security and climate protection not only for the next decades but also for the coming century Provision of secure accessible and environmentally sustainable supplies of water energy and food must thus be a priority One of the major objectives of the world's scientists farmers decisions makers and industrialists is to overcome the present dependence on fossil fuels in the agro food sector This dependency increases the volatility of food prices and affects economic access to sustenance This book provides a critical review of recent developments in solar wind and geothermal energy applications in agriculture and the agro food sector such as processing distribution retail preparation and cooking

Greenhouse Ecosystems G. Stanhill, Herbert Z. Enoch, 1999 Hardbound This book the first integrated treatment of the greenhouse ecosystem consists of sixteen chapters by an international list of expert authorities and is divided into four parts The first section consists of four chapters describing greenhouses their history and geographical distribution their mechanical structures light transmitting cladding and environmental control mechanisms the way in which these modify the greenhouse's aerial microclimate and root environments The second section contains six chapters dealing with the biological contents of greenhouses the most widely grown edible fruit and salad crops ornamental flower and foliage crops the diseases and the pests attacking these crops and the growers cultivating them The third section has four chapters dealing with the flows of energy carbon water and nutrients within and across the boundaries of the greenhouse The two chapters of the fourth section descr **Proceedings of the International Congress on Greenhouse Vegetables** D. Challa, N.J. van de Braak, 2023-08-28 This publication emphasises that an interdisciplinary and multi disciplinary cooperation of scientists throughout the world is important in solving the complex problems facing the greenhouse industry The book itself is an outstanding example of such cooperation The aim of the book is to describe and analyse crop production in greenhouses in relation to climate control to redefine the problem of optimal control from a theoretical point of view and to provide a suitable framework for the design of new scientifically based control systems Though the principles are generally applicable they are discussed against the background of the Dutch greenhouse industry To provide the reader with some background information the historical developments and the economic position of the Dutch horticultural industry are briefly reviewed in the introductory chapter
