CPU-500 Central Processing Unit

Section: Conventional Fire Alarm Control Panels

GENERAL

The CPU-500 Central Processing Unit is used in the System 500 Fire Alarm Control Panel. It directs all intramodule communication and monitors all modules used in a system to detect removal or failure. Field programming of the Fire Alarm Control Panel is accomplished through the CPU-500.

FEATURES

- Two supervised Style Y or Style Z (Class B or A) notification appliance circuits. Fused circuits.
- Form-C relay contact to indicate system trouble.
- Form-C programmable alarm contact.
- Separate Reverse Polarity transmitters for alarm and trouble signaling.
- Local Energy Municipal Box output.
- Notification circuits, remote station trouble output and remote station alarm output are power limited per UL604 requirements, for use with limited-energy cable.
- Programming of all system functions using special key and passwords. Program stored in nonvolatile EEPROM memory which is retained in the event of loss of AC and/or battery.

APPLICATIONS

One CPU-500 is used in the System 500 to provide indication and control of common panel functions and the two alarm notification circuits. It monitors the Main Power Supply and all other system modules.

The CPU-500 supports up to two modules which allows system configuration of 4, 8, 12, or 16 zones of Style B (Class B) or Style D (Class A) Alarm Initiating Circuits.

CONSTRUCTION

The CPU-500 consists of a panel-mounted printed circuit card with integral tactile feel membrane switches. Windows in the membrane panel enable viewing of the indicator LEDs. A slide-in pocket allows for the insertion of a descriptive label for the indicators and switches.

INSTALLATION

The CPU-500 is installed in the upper-left corner of a CAB-500 enclosure.

Connection of a power ribbon, power harness, and bell power harness is needed between the CPU-500 and the Main Power Supply.
