Ontologies For Urban Development Studies In Computational Intelligence:

Ontologies for Urban Development Jacques Teller, John R. Lee, Catherine Roussey, 2007-05-16 Action C21 of the European programme for Cooperation in the field of Scientific and Technical Research COST <http://www.cost.esf.org> is dedicated to investigating urban ontologies for an improved communication in urban civil engineering projects The Action known informally as Towntology brings together a large and heterogeneous grouping from across Europe whose interests range from construction to urban tourism and from transport infrastructure to resource visualisation On 6-7 November 2006 in Geneva the Action convened a successful workshop to address emerging issues in the field This volume presents the contributions to that workshop in many cases revised afterwards to capture some of the outcomes of discussion Many of these contributions are from members of the Towntology group but there are also contributions from other European researchers and from researchers in the US The volume represents a valuable overview of major current issues in the field of urban ontologies and encapsulates many useful and different approaches We hope that it will serve not only as a worthy outcome of Action C21 but also as a valuable resource for a wide range of researchers

Ontologies in Urban Development Projects Gilles Falquet, Claudine Métral, Jacques Teller, Christopher Tweed, 2011-07-29 Ontologies are increasingly recognized as essential tools in information science Although the concepts are well understood theoretically the practical implementation of ontologies remains challenging In this book researchers in computer science information systems ontology engineering urban planning and design civil and building engineering and architecture present an interdisciplinary study of ontology engineering and its application in urban development projects The first part of the book introduces the general notion of ontology describing variations in abstraction level coverage and formality It also discusses the use of ontologies to achieve interoperability and to represent multiple points of view and multilingualism This is illustrated with examples from the urban domain The second part is specific to urban development It covers spatial and geographical knowledge representation the creation of urban ontologies from various knowledge sources the interconnection of urban models and the interaction between standards and domain models The third part presents case studies of the development of ontologies for urban mobility urban morphological processes road systems and cultural heritage Other cases report on the use of ontologies to solve urban development problems in construction business models building regulations and urban regeneration It concludes with a discussion of key challenges for the future deployment of ontologies in this domain This book bridges the gap between urban practitioners and computer scientists As the essence of most urban projects lies in making connections between worldviews ontology development has an important role to play in promoting interoperability between data sources both formal urban databases Building Integrated Models Geographical Information Systems etc and less formal thesauri text records web sources etc This volume offers a comprehensive introduction to ontology engineering for urban development It is essential reading for practitioners and ontology designers working in urban development
