SDL 2009: Design for Motes and Mobiles Rick Reed,Attila Bilgic,Reinhard Gotzhein,2009-09-18 This volume contains the papers presented at the 14th SDL Forum Bochum Germany entitled Design for Motes and Mobiles The SDL Forum has been held every two years for the last three decades and

is one of the most important open events in the calendar for anyone from academia or industry involved in System Design Languages and modelling technologies. It is a primary conference event for discussion of the evolution and use of these languages. The most recent innovations, trends, experiences and concerns in the field are discussed and presented. The SDL Forum series addresses issues related to the modelling and analysis of reactive systems, distributed systems and real time and complex systems such as telecommunications, automotive and aerospace applications. The intended audience of the series includes users of modelling techniques in industrial research and standardization contexts as well as tool vendors and language researchers. Of course, during the last three decades, languages, associated methods and tools have evolved and new ones have been developed. The application domain has changed almost beyond recognition.

Three decades ago, the mobile technology of today was science fiction whereas now we find software systems embedded in inexpensive children's toys. More recently, multi-core processors have become common technology for consumer computers and are beginning to be applied in small devices. Even in small, low-power, independently powered remote devices such as motes and mobile phones, there is enough memory and processing power to support quite sophisticated operating systems and applications. **Computer Networks** Piotr Gaj, Michał Sawicki, Grażyna Suchacka, Andrzej Kwiecień, 2018-06-05. This book constitutes the thoroughly refereed proceedings of the 25th International Conference on Computer Networks CN 2018 held in Gliwice, Poland, in June 2018. The 34 full papers presented were carefully reviewed and selected from 86 submissions. They are organized in topical sections on computer networks, teleinformatics and telecommunications, queueing theory, cybersecurity and quality service.
