Zuverlässige drahtlose Übertragung in maritimen Umgebungen unter Berücksichtigung komplexer metallischer

Strukturen Helge Fielitz, 2016-03-01 Auf Fracht und Passagierschiffen ist heutzutage die drahtlose Übertragung von Navigations- und Telekommunikationsdaten nicht mehr wegzudenken. Eine neue Anwendung für die Nutzung von maritimen Funkverbindungen ist der Aufbau einer schnellen Datenverbindung zwischen Schiffen und Landstationen während der Revierfahrt und in Hafengebieten. Die dort herrschenden komplexen elektromagnetischen Ausbreitungsbedingungen verhindern eine zuverlässige Datenübertragung mit konventionellen Systemen. In dieser Arbeit wird unter anderem die komplexe Mehrwegeausbreitung untersucht und vermessen. Basierend auf diesen Ergebnissen werden adaptive Antennensysteme simuliert, aufgebaut und getestet, um in diesen Umgebungen eine zuverlässige drahtlose Datenübertragung zu realisieren. The operation of today's cargo and passenger vessels without the assistance of wireless navigation and communication is unthinkable. The establishment of short range wireless links with high data rates between ship and shore is a new application for maritime wireless systems. The complex electromagnetic surrounding in these areas prevents the use of conventional wireless data transmissions systems. In this work the complex multipath propagation is investigated and measured. Based on the measurement results adaptive antenna systems are simulated, constructed and tested in order to guarantee reliable wireless data transfer in these areas. *Dissertation Abstracts International*, 2008
