## Cloud Workspace Free:

GOOGLE CLOUD ESSENTIALS(2025 EDITION) E.PAINTSIL,2025-08-09 Introducing beginners to Google Cloud and guiding them through the platform's steep learning curve has never been straightforward or consistent. Likewise, it has often been difficult to find a book that concentrates on a specific area of Google Cloud while offering practical support to build the hands-on skills needed to progress independently. This book is designed to help both beginners and intermediate users get started with Google Cloud Platform GCP. I believe that focusing on infrastructure as a service IaaS and learning how to configure its key services is one of the most effective ways to build practical expertise. My goal is to bring together all the essential materials needed to explore Google Cloud infrastructure in one place so learners can develop a solid foundation in a short time. As a textbook, this guide also aims to clearly explain the concepts behind the most common and important infrastructure resources and services.

Genomics in the Azure Cloud Colby T. Ford,2022-11-14 This practical guide bridges the gap between general cloud computing architecture in Microsoft Azure and scientific computing for bioinformatics and genomics. You'll get a solid understanding of the architecture patterns and services that are offered in Azure and how they might be used in your bioinformatics practice. You'll get code examples that you can reuse for your specific needs. And you'll get plenty of concrete examples to illustrate how a given service is used in a bioinformatics context. You'll also get valuable advice on how to use enterprise platform services to easily scale your bioinformatics workloads. Organize query and analyze genomic data at scale. Build a genomics data lake and accompanying data warehouse. Use Azure Machine Learning to scale your model training. Track model performance and deploy winning models. Orchestrate and automate processing pipelines using Azure Data Factory and Databricks. Cloudify your organization's existing bioinformatics pipelines by moving your workflows to Azure high performance compute services. And more.
