Memory Psychology Myers 9th Edition Study Guide:

Learning and Memory David A. Lieberman, 2011-12-08 This innovative textbook is the first to integrate learning and memory behaviour and cognition. It focuses on fascinating human research in both memory and learning while also bringing in important animal studies and brings the reader up to date with the latest developments in the subject. Students are encouraged to think critically; key theories and issues are looked at in detail; descriptions of experiments include why they were done and how examining the method can help evaluate competing viewpoints. By looking at underlying cognitive processes, students come away with a sense of learning and memory being interrelated actions taken by the same human being rather than two separate activities. Lively and engaging writing is supported by lots of examples of practical applications that show the relevance of lab based research to everyday life. Examples include treatments for phobias and autism, ways to improve eyewitness testimony and methods of enhancing study techniques.

New Trends in Medical and Service Robots Aleksandar Rodić, Doina Pîslă, Hannes Bleuler, 2014-04-08 This volume describes new frontiers in medical and service robotics in the light of recent developments in technology to advance robot design and implementation. In particular, the work looks at advances in design, development and implementation of contemporary surgical rehabilitation and biorobots. Surgical robots allow surgeons greater access to areas under operation using more precise and less invasive methods. Rehabilitation robots facilitate and support the lives of the infirm, elderly people or those with dysfunction of body parts affecting movement. These robots are also used for rehabilitation and related procedures such as training and therapy. Biorobots are designed to imitate the cognition of humans and animals. The need to substitute humans working on delicate, tiresome and monotonous tasks or working with potentially health-damaging toxic materials requires intelligent, high performance service robots with the ability to cooperate, advanced communication and sophisticated perception and cognitive capabilities. Progress in this field is fast and results need to be disseminated to stimulate both practical applications and further research. Thus, these papers are a valuable addition to existing literature.
