An overview of protein structure and function follows and from there the text covers the various roles of technology in elucidating the central concepts of molecular biology from both a historical and contemporary perspective. Tropp then delves into the heart of the book with chapters focused on chromosomes, genetics, replication, DNA damage and repair, recombination, transposition, transcription, and wraps up with translation. Key Features: Presents molecular biology from a biochemical perspective utilizing model systems as they best describe the processes being discussed. Special Topic boxes throughout focus on applications in medicine and technology. Presents real world applications of molecular biology that are necessary for students continuing on to medical school or the biotech industry. An end of chapter study guide includes questions for review and discussion. Difficult or complicated concepts are called out in boxes to further explain and simplify.

Infection and Autoimmunity Naim Mahroum, Abdulla Watad, Yehuda Shoenfeld, 2023-12-23

In 2020 we lost Noel Rose, co-editor of the classic *Infection and Autoimmunity*. To honor and respect his work, a group of experts in the field have taken the initiative to make this book perpetual. The third edition of *Infection and Autoimmunity* updates all the recent and leading papers on infection and autoimmunity, in addition to a dedicated section on the correlation between SARS-CoV-2 infection and autoimmunity. From the very beginning of the COVID-19 pandemic, numerous papers have been published, including studies conducted by the editors and authors of the book on COVID-19 and autoimmunity, and therefore this knowledge has been incorporated into this new edition. The addition and extended coverage on SARS-CoV-2, COVID-19, and autoimmunity are pivotal for the third edition of the book due to the COVID-19 pandemic. Medical students and practitioners, as well as academic staff in medical schools globally, are enthusiastic in searching for better understanding of the correlation between infection and autoimmunity in general and the long term effects of SARS-CoV-2 and COVID-19 on the immune system, in particular, especially in terms of autoimmunity related to the virus. Fully revised and updated by a global group of experts dedicated to and in honor of Noel Rose. Includes 52 completely updated chapters with the latest developments in the field. Is the only book directed specifically at the interactions between infectious agents and autoimmunity. Describes the prevalence and incidence of global issues and current therapeutic approaches. Addresses in full details of the mechanisms behind the emergence of autoimmune diseases secondary to infections. Brings the reader up to date and allows easy access to individual topics in one place.
