A full Description of the Microscope and accessories, and how to use them, accompanies each instrument. The following is a brief outline of the microscope.

A, is a heavy, heavily japanned iron foot, with a rise of two feet. B, with translucent horn lenses, is a high quality, non-reflecting, and is perforated with rubber stoppers, easily adjusted. C, a revolving nosepiece, with openings of different sizes, to graduate the amount of light. D, a COCAINE MICROSCOPE on a MOVABLE ARM, ranged to be turned to light and from any direction—to be used for transparent objects, and above (see text) for opaque objects. E, curved arm, carrying the BODY, which is nickel-plated. The body raised or lowered and adjusted great ability by a very efficient, non-working rack and pinion, move the SOLID ARMED B, (one is left from sight in engraving). K, two sets of lenses, used separately or together, according to the power. See The greatest care is taken with object glasses, and we feel sure they are far superior to anything offered, except for very much higher priced instruments. The image, due to them is again magnified by the eyepiece L, (illustrated and described on next page). This like the DRAW-TUBE M, 11 inches long, & thus allows the body to be made lengthened, and by removing the glass further from the image, increases the magnifying power. The advantages of this will be very apparent when using it. Every part of the Microscope is made in the most thorough manner, and it is constructed with a view to the most efficient service.
