The first sub-image is the input image, and the subsequent sub-images are the receptive fields of the first 100 neurons in the first layer of the CNN. The colors represent the activation levels of these neurons.

Critical Metals in Northwest China Xiaohua Deng, Yan-Jing Chen, Leon Bagas, Chang-Zhi Wu, 2022-02-24 **Archean Granitoids of India: Windows into Early Earth Tectonics** S. Dey, J.-F. Moyen, 2020-12-22 Granitoids form the bulk of the Archean continental crust and preserve key information on early Earth evolution. India hosts five main Archean cratonic blocks: Aravalli, Bundelkhand, Singhbhum, Bastar, and Dharwar. This book summarizes the available information on Archean granitoids of Indian cratons. The chapters cover a broad spectrum of themes related to granitoid typology, emplacement mechanism, petrogenesis, phase equilibria, modelling, temporal distribution, tectonic setting, and their roles in fluid evolution, metal delivery, and mineralizations. The book presents a broader picture incorporating regional to craton scale comparisons, implications for Archean geodynamic processes, and temporal changes thereof. This synthesis work integrating modern concepts on granite petrology and crustal evolution offers an irreplaceable body of reference information for any geologist interested in Archean Indian granitoids.

Minor Minerals, Major Implications: Using Key Mineral Phases to Unravel the Formation and Evolution of Earth's Crust V. van Schijndel, K. Cutts, I. Pereira, M. Guitreau, S. Volante, M. Tedeschi, 2024-01-11 The investigation of key mineral phases such as zircon, apatite, titanite, rutile, monazite, xenotime, allanite, baddeleyite, and garnet explored in this book has provided breakthroughs in our understanding of continental crust composition and evolution, as well as the timing conditions, petrogenetic and geodynamic processes related to its growth and reworking. Therefore, the continuing development of analytical techniques, improvement of tools, data handling, processing, and interpretation allow us to extract and better understand these complex geological processes. This special publication aims at showcasing contributions reviewing the tools and applications of these key minerals, recent technique developments, and new applications using focused case studies investigating igneous, metamorphic, and/or detrital rocks that help us put together the continental crust evolution puzzle. This volume highlights the progress made in studies using these key minerals and their future potential.

Microstructural Geochronology Desmond E. Moser, Fernando Corfu, James R. Darling, Steven M. Reddy, Kimberly Tait, 2017-12-26 Microstructural Geochronology. Geochronology techniques enable the study of geological evolution and environmental change over time. This volume integrates two aspects of

geochronology one based on classical methods of orientation and spatial patterns and the other on ratios of radioactive isotopes and their decay products The chapters illustrate how material science techniques are taking this field to the atomic scale enabling us to image the chemical and structural record of mineral lattice growth and deformation and sometimes the patterns of radioactive parent and daughter atoms themselves to generate a microstructural geochronology from some of the most resilient materials in the solar system First compilation of research focusing on the crystal structure material properties and chemical zoning of the geochronology mineral archive down to nanoscale Novel comparisons of mineral time archives from different rocky planets and asteroids and their shock metamorphic histories Fundamentals on how to reconstruct and date radiogenic isotope distributions using atom probe tomography Microstructural Geochronology will be a valuable resource for graduate students academics and researchers in the fields of petrology geochronology mineralogy geochemistry planetary geology astrobiology chemistry and material science It will also appeal to philosophers and historians of science from other disciplines

This 10 chapter volume encompasses contributions from a wide spectrum of Earth science disciplines including geophysics geodynamics geochemistry and petrology to provide an overview of the nature and evolution of the crust mantle and lithosphere asthenosphere boundaries in different tectonic settings combining studies that exploit different types of data and interpretative approaches The integration of geochemical geophysical and geodynamic data sets and their interpretation provides a state of the art summary of current understanding and will serve as a blueprint for future research activities
