by looking at the implications for the wired local area network infrastructure security Next local area network segmentation and traffic isolation will be discussed By using segmentation and isolation there is the increased opportunity for security boundaries Another concept that will be discussed is the security of the local area network equipment The local area network is only functional if the core equipment is operational so securing equipment is an important part of any security strategy To conclude restriction of local area network access will be investigated and an organizational approach will be discussed Because more and more users need access to local area network resources there must be a way to identify and restrict who is allowed on the network and what access they are granted In wired local area network infrastructure security organizations must remember they are only as secure as their weakest point By carefully considering the various aspects of the local area network security during design these weak points can be reduced and the overall security of the network increased Although it is impossible to be 100% secure and still be functional by using some general guidelines to secure the wired local area network many threats to the network can be reduced if not eliminated

Network and System Security Almantas Kakareka,2013-08-26 Detecting system intrusions is the process of monitoring the events occurring in a computer system or network and analyzing them for signs of possible incidents which are violations or imminent threats of violation of computer security policies acceptable use policies or standard security practices The detection of system intrusions DSIs is primarily focused on identifying possible incidents logging information about them attempting to stop them and reporting them to security administrators In addition organizations use the DSIs for other purposes such as identifying problems with security policies documenting existing threats and deterring individuals from violating security policies The DSIs have become a necessary addition to the security infrastructure of nearly every organization In addition the DSIs typically record information related to observed events notify security administrators of important observed events and produce reports Many of the DSIs can also respond to a detected threat by attempting to prevent it from succeeding They use several response techniques which involve the DSIs stopping the attack itself changing the security environment reconfiguring a firewall or changing the attack s content This chapter describes the characteristics of the DSI technologies and provides recommendations for designing implementing configuring securing monitoring and maintaining them

Network and System Security Michael West,2013-08-26 Intrusion prevention is the process of performing intrusion detection and attempting to stop detected possible incidents Intrusion prevention systems IPSs focus primarily on identifying possible incidents logging information about them attempting to stop them and reporting them to security administrators In addition organizations use IPSs for other purposes such as identifying problems with security policies documenting existing threats and deterring individuals from violating security policies IPSs have become a necessary addition to the security infrastructure of nearly every organization IPSs typically record information related to observed events notify security administrators of important observed events and produce reports Many IPSs can also respond to a detected threat by

attempting to prevent it from succeeding They use several response techniques which involve the IPS stopping the attack itself changing the security environment reconfiguring a firewall or changing the attack's content This chapter describes the characteristics of IPS technologies and provides recommendations for designing implementing configuring securing monitoring and maintaining them The types of IPS technologies are differentiated primarily by the types of events that they monitor and the ways in which they are deployed

Computer Network Security Joseph Migga Kizza, 2005-04-07 A comprehensive survey of computer network security concepts methods and practices This authoritative volume provides an optimal description of the principles and applications of computer network security in particular and cyberspace security in general The book is thematically divided into three segments Part I describes the operation and security conditions surrounding computer networks Part II builds from there and exposes readers to the prevailing security situation based on a constant security threat and Part III the core presents readers with most of the best practices and solutions currently in use It is intended as both a teaching tool and reference This broad ranging text reference comprehensively surveys computer network security concepts methods and practices and covers network security tools policies and administrative goals in an integrated manner It is an essential security resource for undergraduate or graduate study practitioners in networks and professionals who develop and maintain secure computer network systems

Network and System Security Bill Mansoor, 2013-08-26 Many organizations encounter a common problem in their approach to intranet security They treat intranets as an internal tool that is hidden deep in the corporate network and is somehow immune from external attacks This is far from the truth however An intranet is basically a Web application exposed to a hostile environment the same way as the corporate Web site and therefore vulnerable to the same scope of threats The fact that it is intended for employees and trusted parties doesn't guarantee anything against hacker attacks viruses and spam Failing to introduce a dedicated intranet security policy entails a range of risks associated with sensitive information leakage and data loss For many organizations safeguarding intranets is even more important than protecting their Web sites Intranets usually contain extremely confidential assets crucial for both day to day activity and strategic business development A successful attack may result in disruption of the organization's operations significant reputation damage and infringement of legal regulations To avoid unexpected embarrassment after launching an intranet organizations must carefully evaluate the solution's capability to cope with security issues So with the preceding in mind this chapter provides information about all aspects of threats that affect intranet security The chapter is intended for organizations that understand the changing nature of the threat landscape and what might be done to mitigate it
