*Philosophy and Memory Traces* John Sutton,1998-03-05 Philosophy and Memory Traces defends two theories of autobiographical memory One is a bewildering historical view of memories as dynamic patterns in fleeting animal spirits nervous fluids which rummaged through the pores of brain and body The other is new connectionism in which memories are stored only superpositionally and reconstructed rather than reproduced Both models argues John Sutton depart from static archival metaphors by employing distributed representation which brings interference and confusion between memory traces Both raise urgent issues about control of the personal past and about relations between self and body Sutton demonstrates the role of bizarre body fluids in moral physiology as philosophers from Descartes and Locke to Coleridge struggled to control their own innards and impose cognitive discipline on the phantasmal chaos of association Going on to defend connectionism against Fodor and critics of passive mental representations he shows how problems of the self are implicated in cognitive science   **The Cognitive Neuroscience of Memory** Howard Eichenbaum,2012-01-12 Organized to provide a background to the basic cellular mechanisms of memory and by the major memory systems in the brain this text offers an up to date account of our understanding of how the brain accomplishes the phenomenology of memory   **Neurobiological Models of Psychotherapy: How Psychotherapy Changes the Brain** Arash Javanbakht,Cristina Maria Alberini,2019-09-25
