## Introduction to Microbiology

**What is Microbiology?**  
Microbiology is the study of living organisms that are too small to be seen with the naked eye. This includes bacteria, fungi, viruses, and protozoa. Microbiology is a branch of biology that deals with the study of life at the microscopic level.

**Why Study Microbiology?**  
Microbiology is a very important field of study. It helps us understand the world around us and how it works. It also helps us to develop new medicines and vaccines to fight diseases. Microbiology is also important in the food industry, as it helps us to understand how food is preserved and how it can become spoiled.

## Koch's and Microbiology

**1890** Robert Koch, a German physician and microbiologist, was the first to prove that bacteria cause disease. He is known as the "father of bacteriology".

**1890** Koch's Postulates are a set of four criteria that must be met to prove that a specific microorganism causes a specific disease. They are: 1. The microorganism must be found in all cases of the disease. 2. The microorganism must be isolated from the diseased host and grown in pure culture. 3. The pure culture must cause the disease in a healthy host. 4. The microorganism must be re-isolated from the diseased host and identified as the same as the original one.

## Evolutional Evolution

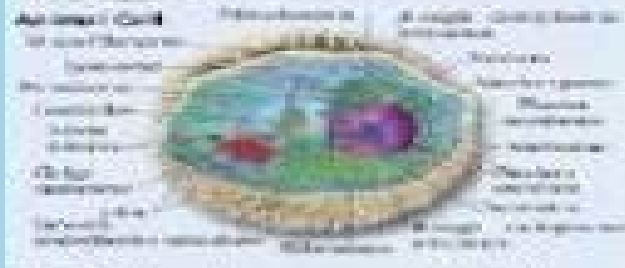

## New Prokaryotes and Eukaryotes

**PROKARYOTES**  
Prokaryotes are single-celled organisms that lack a nucleus and other organelles. They are the simplest and most ancient forms of life. Examples include bacteria and archaea.

**EUKARYOTES**  
Eukaryotes are more complex organisms that have a nucleus and other organelles. They are found in all kingdoms of life, including animals, plants, fungi, and protists.

## The Cell Theory

The cell theory is a fundamental principle of biology. It states that all living organisms are made of cells, and that cells are the basic units of life. The cell theory was developed by three scientists: Matthias Schleiden, Rudolf Virchow, and Robert Brown.

## Robert Brown's Discovery

Robert Brown was a Scottish naturalist and geologist. He is best known for his discovery of the cell nucleus. In 1831, he observed that all cells have a central, dark-stained region called the nucleus. This discovery was a major breakthrough in the study of cells.
