practical aspects including the leading problem in developing block diagrams noise disturbances and plant perturbations State feedback and state estimators are designed using state variable equations and transfer functions offering a comparison of the two approaches The incorporation of MATLAB throughout the text helps students to avoid time consuming computation and concentrate on control system design and analysis

Cellular Neural Networks

Gabriele Manganaro, Paolo Arena, Luigi Fortuna, 2012-12-06 The field of cellular neural networks CNNs is of growing importance in non linear circuits and systems and it is maturing to the point of becoming a new area of study in general nonlinear theory CNNs emerged through two seminal papers co authored by Professor Leon O Chua back in 1988 Since then the attention that CNNs have attracted in the scientific community has been vast For instance there are international workshops dedicated to CNNs and their applications special issues published in both the International Journal of Circuit Theory and in the IEEE Transactions on Circuits and Systems and there are also Associate Editors appointed in the latter journal especially for the CNN field All of this bears witness the importance that CNNs are gaining within the scientific community Without doubt this book is a primer in the field Its extensive coverage provides the reader with a very comprehensive view of aspects involved in the theory and applications of cellular neural networks The authors have done an excellent job merging basic CNN theory synchronization spatio temporal phenomena and hardware implementation into eight exquisitely written chapters Each chapter is thoroughly illustrated with examples and case studies The result is a book that is not only excellent as a professional reference but also very appealing as a textbook My view is that students as well professional engineers will find this volume extremely useful
