AI techniques to build smart IoT solutions from scratch
Use machine learning and deep learning techniques to build smart voice recognition and facial detection systems
Gain insights into IoT data using algorithms and implement them in projects
Perform anomaly detection for time series data and other types of IoT data
Implement embedded systems learning techniques for machine learning on small devices
Apply pre trained machine learning models to an edge device
Deploy machine learning models to web apps and mobile using TensorFlow js and Java
Who this book is for
If you're an IoT practitioner looking to incorporate AI techniques to build smart IoT solutions without having to trawl through a lot of AI theory this AI IoT book is for you
Data scientists and AI developers who want to build IoT focused AI solutions will also find this book useful
Knowledge of the Python programming language and basic IoT concepts is required to grasp the concepts covered in this artificial intelligence book more effectively

Machine Learning for iOS Developers Abhishek Mishra, 2020-03-04
Harness the power of Apple iOS machine learning ML capabilities and learn the concepts and techniques necessary to be a successful Apple iOS machine learning practitioner

Machine learning ML is the science of getting computers to act without being explicitly programmed A branch of Artificial Intelligence AI machine learning techniques offer ways to identify trends forecast behavior and make recommendations The Apple iOS Software Development Kit SDK allows developers to integrate ML services such as speech recognition and language translation into mobile devices most of which can be used in multi cloud settings Focusing on Apple s ML services Machine Learning for iOS Developers is an up to date introduction to the field instructing readers to implement machine learning in iOS applications Assuming no prior experience with machine learning this reader friendly guide offers expert instruction and practical examples of ML integration in iOS Organized into two sections the book s clearly written chapters first cover fundamental ML concepts the different types of ML systems their practical uses and the potential challenges of ML solutions The second section teaches readers to use models both pre trained and user built with Apple s CoreML framework Source code examples are provided for readers to download and use in their own projects This book helps readers Understand the theoretical concepts and practical applications of machine learning used in predictive data analytics Build deploy and maintain ML systems for tasks such as model validation optimization scalability and real time streaming Develop skills in data acquisition and modeling classification and regression Compare traditional vs ML approaches and machine learning on handsets vs machine learning as a service MLaaS Implement decision tree based models an instance based machine learning system and integrate Scikit learn Keras models with CoreML Machine Learning for iOS Developers is a must have resource software engineers and mobile solutions architects wishing to learn ML concepts and implement machine learning on iOS Apps Communication Arts ,2004 *Standard & Poor's Stock Reports* ,2009-07 **A**

Framework for Real-time 3D Reconstruction by Space Carving using Graphics Hardware Christian Nitschke,2012-03-02 Diploma Thesis from the year 2006 in the subject Communications Research Studies Enquiries grade 1 University of Weimar language English abstract Reconstruction of real world scenes from a set of multiple images is a topic in Computer Vision and 3D Computer Graphics with many interesting applications There exists a powerful algorithm for shape reconstruction from arbitrary viewpoints called Space Carving However it is computationally expensive and hence can not be used with applications in the field of 3D video or CSCW as well as interactive 3D model creation Attempts have been made to achieve real time framerates using PC cluster systems While these provide enough performance they are also expensive and less flexible Approaches that use GPU hardware acceleration on single workstations achieve interactive framerates for novel view synthesis but do not provide an explicit volumetric representation of the whole scene The proposed approach shows the efforts in developing a GPU hardware accelerated framework for obtaining the volumetric photo hull of a dynamic 3D scene as seen from multiple calibrated cameras High performance is achieved by employing a shape from silhouette technique in advance to obtain a tight initial volume for Space Carving Also several speed up techniques are presented to increase efficiency Since the entire processing is done on a single PC the framework can be applied to mobile

setups enabling a wide range of further applications The approach is explained using programmable vertex and fragment processors with current hardware and compared to highly optimized CPU implementations It is shown that the new approach can outperform the latter by more than one magnitude The downloadable introduction has been written specifically for this offer Its contents are only a subset of the real introductory chapter of the thesis **Building a PC For Dummies** Mark L.
