Portraits of Viruses F. Fenner, A. Gibbs, 1988-08-26      **Foot and Mouth Disease** Francisco Sobrino, Esteban Domingo, 2019-04-30 The shock following the recent outbreak of foot and mouth disease FMD in the UK dispelled the notion that this disease was permanently under control and could be forgotten FMD proved to be an endemic disease in many countries and continues to pose a major threat to animal health worldwide The development of more effective and socially acceptable      *Plant Virus Disease Control* A. Hadidi, R. K. Khetarpal, H. Koganezawa, 1998 With an emphasis on plant viruses and virus control methods that have a significant economic impact 32 chapters present information on diseases which affect fruits grains sugarcane potatoes peanuts and other crops The chapters are organized into sections on conventional biochemical and molecular approaches to resistance building control of viral vectors quarantine and certification elimination and detection Eighteen additional chapters discuss the present status of disease control for specific viruses and viroids from around the world examples of which include barley yellow dwarf virus rice tungro virus and tomato yellow leaf curl disease Annotation copyrighted by Book News Inc Portland OR      **Viral Pathogenesis** Neal Nathanson, Rafi Ahmed, 1997 Here is the most complete reference devoted specifically to viral pathogenesis describing both the development of viral disease and the host virus interaction Presenting contributions from leading authorities in this particularly topical field this comprehensive text expounds the current knowledge on the pathogenesis of viruses an understanding of which is critical to treatment and prevention of viral diseases The book opens with a thorough review of principles covering in detail the life cycle of viruses including entry dissemination shedding and transmission and replication the pathology of viral disease including disease mechanisms virus virulence and viral oncogenesis immune responses including immune suppression and therapeutic applications The second section focuses on experimental pathogenesis covering detection and quantification of viral genomes messages and proteins in tissues and organs and examining classical and new methods for animal studies Chapters in the next section devoted to classical models of viral pathogenesis cover ectromelia poliomyelitis rabies lymphocytic choriomeningitis virus avian and murine retroviruses lentiviruses and reoviruses The final section covers systems pathogenesis emphasizing viral diseases of humans but also drawing on animal studies that elucidate the pathogenesis of human infections      *Animal Health and Production: Identifying Challenges and Finding a Way Forward* Izhar Hyder Qazi, Yangchun Cao, Jesus R. Requena, 2025-11-24 It has been said that the difficulty with predicting the future is that uncertainty seems to increase exponentially with the number years in the future simply because we can't predict technology let alone geopolitical upheavals By the year 2050 our world will grow to 10 billion people and we need to feed them with shrinking resources At the same time we must take into consideration that global warming will have a profound impact on the animal production systems in coming decades if no timely measures are adopted to address this pressing issue These issues desperately need to be addressed and certainly solutions to these pressing problems will be intertwined as we

strive to feed a growing population while building sustainable and efficient food systems Clearly health is at the heart of the sustainable animal production systems therefore optimizing the animal health and mitigating the stresses of pathogen and production related diseases is also essential It is now well established that animals are more susceptible to diseases when they are kept under stressful environments Therefore improved animal management systems focusing on disease prevention are essential for optimized production of animals In addition it has been said that over 60% of pathogens that cause human diseases originate from domestic or wild animals therefore protecting the health of animals and the environment protects human health Moreover antimicrobial resistance AMR has been regarded one of the most pressing health issues of the present time and as well as is a growing threat to livelihoods and global food security It is daunting to even imagine a world where there is almost no cure for diseases in humans animals and plants This worst case scenario might turn out to be a reality as pathogenic microbes develop resistance to the antimicrobial arsenals that are used to combat them The societal demand regarding public health zoonoses AMR etc welfare and sustainability i e feed efficiency methane emission is also increasing The good news is that solutions do exist and the quest for efficient production systems intelligent breeding improved nutrition viable diagnostic methods tailored made biosecurity procedures and integrated health and welfare management is ongoing with the scientific community and industry Fittingly it has been said that all of the world s big problems are multidisciplinary in nature therefore the present day animal scientists and veterinary researchers must break their expertise based cocoons and work in a collaborative manner to sustainably meet the on going and future increasing demand of animal source foods and to ensure good health of animals Finally as we search for quantum leaps in productivity novel and innovative technological solutions need to be put in the practice to achieve these envisaged goals

- 1 Studies focused on sustainable animal production particularly those centred on the principle of clean green and ethical animal management systems
- 2 Disease management including transboundary diseases zoonoses of course and control strategies
- 3 Studies focusing on alternatives to antibiotic use in animal health and production systems and mitigation of AMR threat
- 4 Mechanistic studies focused on the host pathogen interactions
- 5 Practice and the development of novel and classical therapeutics aimed at improving health and production
- 6 Studies using innovative technological and bioinformatic tools to address the pressing issues relevant to animal health and production
- 7 Studies focused on bringing the animal production systems on the path to climate neutrality
