The On-line Electric Vehicle Nam P. Suh, Dong Ho Cho, 2017-04-04 This book details the design and technology of the on line electric vehicle OLEV system and its enabling wireless power transfer technology the shaped magnetic field in resonance SMFIR The text shows how OLEV systems can achieve their three linked important goals reduction of CO₂ produced by ground transportation improved energy efficiency of ground transportation and contribution to the amelioration or prevention of climate change and global warming SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure practical issues such as those involved with pedestrian safety are considered Furthermore the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent Importantly the use of Professor Suh s axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time The book covers both the detailed design and the relevant systems engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities The introduction to axiomatic design and the in depth discussion of system and technology development provided by The On line Electric Vehicle is instructive to graduate students in electrical mechanical and transportation engineering and will help engineers and designers to master the efficient timely and to cost implementation of large scale networked systems Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book

Optimal Charging Control of Electric Vehicles in Smart Grids Wanrong Tang, Ying Jun (Angela) Zhang, 2016-10-14 This book introduces the optimal online charging control of electric vehicles EVs and battery energy storage systems BESSs in smart grids The ultimate goal is to minimize the total energy cost as well as reduce the fluctuation of the total power flow caused by the integration of the EVs and renewable energy generators Using both theoretic analysis and data driven numerical results the authors reveal the effectiveness and efficiency of the proposed control techniques A major benefit of these control techniques is their practicality since they do not rely on any non causal knowledge of future information Researchers operators of power grids and EV users will find this to be an exceptional resource It is also suitable for advanced level students of computer science interested in networks electric vehicles and energy systems

Field and Stream ,1966 [Approximation and Online Algorithms](#) Parinya Chalermsook, Bundit Laekhanukit, 2022-10-20 This book constitutes revised selected papers from the thoroughly refereed workshop proceedings of the 20th International Workshop on Approximation and Online Algorithms WAOA 2022 which was colocated with ALGO 2022 and took place in Potsdam Germany in September 2022 The 12 papers

included in these proceedings were carefully reviewed and selected from 21 submissions. They focus on topics such as graph algorithms, network design, algorithmic game theory, approximation, and online algorithms etc. **Forest and Stream**, 1896

Machine Learning Algorithms and Applications in Engineering Prasenjit Chatterjee, Morteza Yazdani, Francisco Fernández-Navarro, Javier Pérez-Rodríguez, 2023-02-28. Machine Learning (ML) is a sub-field of artificial intelligence that uses soft computing and algorithms to enable computers to learn on their own and identify patterns in observed data, build models that explain the world, and predict things without having explicit pre-programmed rules and models. This book discusses various applications of ML in engineering fields and the use of ML algorithms in solving challenging engineering problems ranging from biomedical transport, supply chain, and logistics to manufacturing and industrial. Through numerous case studies, it will assist researchers and practitioners in selecting the correct options and strategies for managing organizational tasks.

Events Management Glenn A. J. Bowdin, Johnny Allen, Rob Harris, Leo Jago, William O'Toole, Ian McDonnell, 2023-07-31. A must-have introductory text of unrivalled coverage and depth focusing on events planning and management, the fourth edition of *Events Management* provides a complete A to Z of the principles and practices of planning, managing, and staging events. The book offers a systematic guide to organising successful events, examining areas such as event design, logistics, marketing, human resource management, financial planning, risk management, impacts, evaluation, and reporting. The fourth edition has been fully updated and revised to include content covering technology, including virtual and hybrid events, concepts such as social capital, soft power, and events, social inclusion, equality, accessibility, and diversity, and the latest industry reports, research, and legal frameworks. The book is logically structured and features new case studies showing real-life applications and highlighting issues with planning events of all types and scales in a range of geographical locations. This book has been dubbed the events management bible and fosters an interactive learning experience amongst scholars of events management, tourism, and hospitality. *World Watch*, 1993. **Effect of the Ionosphere on Space and**

Terrestrial Systems, 1978. **Modeling Magnetospheric Plasma Processes** Gordon R. Wilson, 1991-01-08. Published by the American Geophysical Union as part of the Geophysical Monograph Series, Volume 62. The ultimate goal of modeling of the plasma in Earth's environment is an understanding of the magnetosphere and ionosphere as a coupled global system. To achieve this goal requires a coordinated effort between models applied to different spatial scales. The desire to model this system on a global scale is leading to models which encompass larger and larger regions. The ever-increasing availability of computing resources has allowed models to expand to 2 and 3 dimensions. At the other extreme are the micro-scale processes which transfer energy to individual particles within the global system. As more detailed observations become available, the necessity for accurately including such processes in the global models becomes more apparent. Then it becomes a question of how to incorporate the necessary physical processes from all scale sizes into a model of a global system. It now seems clear that such multi-scale scenarios exist where micro-scale processes provide energy to the plasma which flows outward from

Earth into the distant magnetotail before returning to the near Earth regions The challenge of incorporating all relevant processes into a model of this entire plasma path is a formidable one The existence of separate models of the separate steps along this pathway leads directly to efforts to fuse models with different scales into a single self consistent treatment
