

## Study Guide Covering Work

### 1. Definition of Work

- **Work is done when a force causes an object to move a certain distance.** It's about the transfer of energy that occurs due to that force.
- **Key Components:**
  - **Force:** A push or pull on an object (measured in Newtons).
  - **Displacement:** The distance an object moves in the direction of the force (measured in meters).
- **Important Note:** If the object doesn't move, or if the force is perpendicular to the direction of motion, **no work is done** (even if it feels like you're exerting effort!).

### 2. Formula for Work

- **Work (W) = Force (F) x Displacement (d) x cos( $\theta$ )**
  - $\theta$  (theta): The angle between the force and the direction of displacement.
- **Units:** Work is measured in **Joules (J)**. One joule is equal to one Newton-meter (N-m).

### 3. Types of Work

- **Positive Work:** When the force and displacement are in the same direction (e.g., pushing a box across the floor).
- **Negative Work:** When the force and displacement are in opposite directions (e.g., friction acting on a sliding object).
- **Zero Work:** When the force and displacement are perpendicular (e.g., carrying a book horizontally).

### 4. Examples of Work

- **Lifting a weight:** You do positive work against gravity.
- **Pushing a shopping cart:** You do positive work to overcome friction.
- **A ball rolling down a hill:** Gravity does positive work on the ball.
- **Catching a ball:** You do negative work to stop the ball's motion.

### 5. Work and Energy

- **Work-Energy Theorem:** The work done on an object is equal to the change in its kinetic energy (energy of motion).
