No Way Home The Decline Of The Worlds Great Animal Migrations:

No Way Home David S. Wilcove, 2012-09-26 Animal migration is a magnificent sight a mile long blanket of cranes rising from a Nebraska river and filling the sky hundreds of thousands of wildebeests marching across the Serengeti a blaze of orange as millions of monarch butterflies spread their wings to take flight Nature's great migrations have captivated countless spectators none more so than premier ecologist David S Wilcove In *No Way Home* his awe is palpable as are the growing threats to migratory animals We may be witnessing a dying phenomenon among many species Migration has always been arduous but today's travelers face unprecedented dangers Skyscrapers and cell towers lure birds and bats to untimely deaths fences and farms block herds of antelope salmon are caught en route between ocean and river breeding and wintering grounds are paved over or plowed and global warming disrupts the synchronized schedules of predators and prey The result is a dramatic decline in the number of migrants Wilcove guides us on their treacherous journeys describing the barriers to migration and exploring what compels animals to keep on trekking He also brings to life the adventures of scientists who study migrants Often as bold as their subjects researchers speed wildly along deserted roads to track birds soaring overhead explore glaciers in search of frozen locusts and outfit dragonflies with transmitters weighing less than one one hundredth of an ounce Scientific discoveries and advanced technologies are helping us to understand migrations better but alone they won't stop sea turtles and songbirds from going the way of the bison or passenger pigeon What's required is the commitment and cooperation of the far flung countries migrants cross long before extinction is a threat As Wilcove writes protecting the abundance of migration is key to protecting the glory of migration *No Way Home* offers powerful inspiration to preserve those glorious journeys

Global Decline of Insects Hamadttu Abdel Farag El-Shafie, 2022-07-20 Insects are a group of animals that contribute significantly to the proper functioning of different ecosystems on the planet They provide services such as pollinating crops recycling nutrients and controlling pests Many scientific publications and reports have studied the current global decline of insects This decline can severely affect other

groups of animals including birds reptiles amphibians fish and small mammals that utilize insects as a source of food This will have a great impact on the trophic cascade and an eventual adverse effect on the overall ecosystem This book provides insights into the possible reasons behind the decline of insects as well as potential measures that might mitigate this decline It contains eleven chapters written by different experts The book is useful for a wide range of readers including entomologists ecologists botanists environmentalists and amateurs who love collecting and preserving insects

Animal Migration E. J. Milner-Gulland, John M. Fryxell, Anthony R. E. Sinclair, 2011-01-20 Despite the wealth of natural historical research conducted on migration over decades there is still a dearth of hypothesis driven studies that fully integrate theory and empirical analyses to understand the causes and consequences of migration and a taxonomic bias towards birds in much migration research This book takes a comparative integrated view of animal migration linking evolution with ecology and management theory with empirical research and embracing all the major migratory taxa including human pastoralists The scope extends beyond the target organism to consider the ecosystem level dynamics of migration The emphasis is on exciting new research avenues that are now opening up whether due to advances in our understanding of migration as a biological phenomenon or through the availability of a range of new technologies Broad themes that emerge include integrating migration into the broad spectrum of movement behaviour the need for a comparative and cross taxonomic approach that considers migration at a range of temporal and spatial scales and examination of the key roles of resource uncertainty and spatial heterogeneity in driving migratory behaviour The book identifies the potential for new tools to revolutionise the study of migration including satellite tracking technology genomics and modelling all of which are linked to increasing computing power We are now on the verge of a breakthrough in migration research which is crucial given the multiple threats that face the conservation of migration as a phenomenon including climate change

Endangered Species Cynthia A. Bily, 2010-07-16 An endangered species is one whose numbers are so small that it is at risk of extinction Extinction is a natural phenomenon with a natural background rate of about one to five species going extinct per year The astonishing and sad fact is that we are now losing species at 1 000 to 10 000 times the background rate There are things we can all do now to help slow this unnatural rate of extinction Give your readers a powerful collection of essays that explain key issues relating to endangered species Are private property owners the best protectors of wildlife Does the Polar bear need federal protection Are the oceans fish in serious decline Answers are provided to these and other important questions

maintains the reputation of the highly regarded original presenting the most current information available in this globally crucial area of research and study It brings together the dimensions of biodiversity and examines both the services it provides and the measures to protect it Major themes of the work include the evolution of biodiversity systems for classifying and defining biodiversity ecological patterns and theories of biodiversity and an assessment of contemporary patterns and trends in biodiversity The science of biodiversity has become the science of our future It is an interdisciplinary field spanning areas of both physical and life sciences Our awareness of the loss of biodiversity has brought a long overdue appreciation of the magnitude of this loss and a determination to develop the tools to protect our future Second edition includes over 100 new articles and 226 updated articles covering this multidisciplinary field from evolution to habits to economics in 7 volumes The editors of this edition are all well respected instantly recognizable academics operating at the top of their respective fields in biodiversity research readers can be assured that they are reading material that has been meticulously checked and reviewed by experts Approximately 1 800 figures and 350 tables complement the text and more than 3 000 glossary entries explain key terms *The Atlantic Monthly* ,2007 **Symposium** ,2008 *Michigan State Journal of International Law* ,2008 **Selected New Books** New Jersey State Library,2009 *Homesickness* Ryan Hediger,2019-10-15 Introducing a posthumanist concept of nostalgia to analyze steadily widening themes of animality home travel slavery shopping and war in U S literature after 1945 In the Anthropocene as climate change renders environments less stable the human desire for place underscores the weakness of the individual in the face of the world In this book Ryan Hediger introduces a distinctive notion of homesickness one in which the longing for place demonstrates not only human vulnerability but also intersubjectivity beyond the human Arguing that this feeling is unavoidable and characteristically posthumanist Hediger studies the complex mix of attitudes toward home the homely and the familiar in an age of resurgent cosmopolitanism especially eco cosmopolitanism *Homesickness* closely examines U S literature mostly after 1945 including prominent writers such as Annie Proulx Marilynne Robinson and Ernest Hemingway in light of the challenges and themes of the Anthropocene Hediger argues that our desire for home is shorthand for a set of important hopes worth defending serious and genuine relationships to places and their biotic regimes and landforms membership in vital cultures human and nonhuman resistance to capital infused forms of globalization that flatten differences and turn life and place into mere resources Our homesickness according to Hediger is inevitable because the self is necessarily constructed with reference to the material past Therefore homesickness is not something to dismiss as nostalgic or reactionary but is rather a structure of feeling to come to terms with and even to cultivate Recasting an expansive range of fields through the lens of homesickness from ecocriticism to animal studies and disability studies eco philosophy to posthumanist theory *Homesickness* speaks not only to the desire for a physical structure or place but also to a wide range of longings and dislocations including those related to subjectivity memory bodies literary form and language **Public Library Core Collection** John Greenfieldt,Patrice Bartell,2008 Wilson
