their coaches are very keen to reduce the recovery period and hasten return to play Common assessment methods may be insufficient for making the return to play decision New assessment methods are needed Rehabilitation methods also need to be optimised to ensure the player has fully recovered to protect the player and others from an increased risk of further injury This Research Topic focuses on brain injury assessment and interventions to improve recovery from mild moderate or severe TBI categories We welcome original research articles minireviews reviews comments and meta analyses employed in animal or human studies relevant to brain injury assessment and rehabilitation interventions
