Microcosm E Coli And The New Science Of Life:

Microcosm Carl Zimmer,2012-12-31 In 1946 a twenty year old medical school student called Joshua Lederberg decided to find out whether microbes make love Lederberg was motivated not by a displaced libido but by scientific ambition At the age of seven he had declared that he hoped to become like Einstein and to discover a few things in science The few things Lederberg discovered would revolutionise modern science and earn him a Nobel Prize He chose to observe the breeding habits of a certain bacterium called Escherichia coli better known as E coli His experiments used defective E coli strains lacking the essential molecules to reproduce by cloning which should by rights perish in the petri dish But slowly a few colonies of survivors began to spread across the dishes The only possible explanation for their survival was that they were a product of sex Not only had Lederberg proved that bacteria have sex he had also proved they have genes Since then a bacterium that was once nothing more than a humble resident of the human gut has become our best guide to what it means to be alive Most of us might only know E coli for its lethal strain that causes food poisoning but Zimmer uses E coli as a prism to understand what life is what it was and what it will become We learn how E coli microbes talk to each other how studies of their evolution represent the most powerful evidence in support of natural selection and how they might just explain life on other planets

Life at High Pressure Alister Macdonald,2021-07-12 The book discusses the ways in which high hydrostatic pressure i e water pressure affects all grades of life which thrive at pressures much greater those in our normal environment The deep sea is the best known high pressure environment where pressures reach a thousand times greater than those at the surface yet it is populated by a variety of animals and microorganisms The earth s crust supports microorganisms which live in water filled pores at high pressure In addition the load bearing joints of animals like ourselves experience pulses of hydrostatic pressure of a magnitude similar to the pressure at mid ocean depths These pressures affect molecular structures and biochemical reactions Basic cellular processes are drastically affected the growth and division of cells the way nerves conduct impulses and the chemical reactions which provide energy Adaptation to high pressure also occurs in complex physiological systems such as those which provide buoyancy Probably the greatest challenge to our understanding of adaptation to high pressure is the stabilisation of the nervous system of deep sea animals to avoid convulsions which pressure causes in shallow water animals Additionally the book provides insight into the engineering required to study life at high pressure equipment which can trap small deep sea animals and retrieve them at their high pressure equivalent equipment for microorganisms laboratory microscopes which can focus on living cells under high pressure incubators for bacteria which require high pressure to grow high pressure aquaria for marine animals and lastly and briefly manned and unmanned submersible vessels Landers and deep drill hole sampling Rather like the organisms studied many laboratory instruments have been adapted to function at high pressure

Death & Sex Tyler Volk,Dorion Sagan,2009-10-13 On DEATH What is shared by spawning Pacific salmon towering trees and suicidal bacteria In his lucid and concise exploration

of how and why things die Tyler Volk explains the intriguing ways creatures including ourselves use death to actually enhance life Death is not simply the end of the living though even in that aspect the Grim Reaper has long been essential to natural selection Indeed the exquisite schemes and styles of death that have emerged from evolution have been essential to the great story from life's beginnings in tiny bacteria nearly four thousand million years ago to ancient human rituals surrounding death and continuing to the existential concerns of human culture and consciousness today Volk weaves together autobiography biology Earth history and results of fascinating studies that show how thoughts of our own mortality affect our everyday lives to prove how an understanding of what some have called the ultimate taboo can enrich the celebration of life and SEX In Sex Dorion Sagan takes a delightful irreverent and informative romp through the science philosophy and literature of humanity's most obsessive subject Have you ever wondered what the anatomy and promiscuous behaviors of chimpanzees and the sexual bullying of gorillas tell us about ourselves Why we lost our hair What amoebas have to do with desire Linking evolutionary biology to salacious readings of the lives and thoughts of such notables as the Marquis de Sade and Simone de Beauvoir and discussing works as varied as The Story of O and Silence of the Lambs Sex touches on a potpourri of interrelated topics ranging from animal genitalia to sperm competition the difference between nakedness and nudity jealousy's status as an aphrodisiac and the origins of language Casanova and music ovulation and clothes mother in law jokes and alpha females love and loneliness A brief wonderfully entertaining highly literate foray into the origins and evolution of sex Two books in one cover Death Sex unravel and answer some of life's most fundamental questions

God Gametes 4 and The Darwinian Fallacy Robert Jameson, 2015-05-28 The God Gametes theory argues that life on earth is part of the reproductive system of a parent species from a higher level of a multiverse We contend a single female member of the parent species colonised earth for the purpose of reproduction She drove the complexity of life on earth until one species homo sapiens evolved a large brain and the ability to host a consciousness reproductive cell of a male parent species Charles Darwin called his book On the Origin of Species but natural selection is not about the origin of anything His theory was not about the origin of species nor about the origin of life Natural selection argues the case for how one living species might gradually evolve into another living species It has nothing to do with how anything originated Supporters of this concept foster the myth that with enough throws of the dice with enough random coin flips then blind probability can design complexity It cannot
