China's Electric Vehicle Industry Yingqi Liu, 2025-09-01 Innovation and Development of China's New Energy Vehicles Industry provides comprehensive insights into the role of new energy vehicles in facilitating the global energy transition. The book aims to foster an understanding of how these vehicles contribute to the shift towards green energy. Drawing from extensive data collected from over 20 cities, 40 companies, and more than 500 questionnaires, the book offers practical information for policymakers and industry stakeholders. Beyond the technological aspects such as battery technology, electric drive systems, and charging infrastructure, the book also discusses policy support mechanisms, financial subsidies, tax incentives, and regulatory frameworks. It includes international case studies from the USA and UK, aiding readers in grasping the global dynamics and fostering international cooperation. The book is essential for understanding the interplay between new energy vehicles and energy transition, providing actionable insights for industry professionals, researchers, and policymakers. Presents comprehensive insights into the current Chinese approach to the new energy vehicle industry. Highlights technological innovation as the core driving factor in business model innovation, aligning with the rapidly evolving nature of new energy vehicles and their reliance on technological breakthroughs in battery systems, energy storage, and charging infrastructure. Includes case study comparisons to new energy vehicle industry development in other countries and in global policy development.

Optimization and data-driven approaches for energy storage-based demand response to achieve power system flexibility Yue Xiang, Yingjun Wu, Luhao Wang, Zixuan Wang, Chenghong Gu, 2025-07-31 With the widespread adoption of distributed renewable energy and electric vehicles, the power grid faces new challenges in ensuring stable and sustainable development. Concurrently, insufficient local consumption resulting from distributed generation also impacts the power grid's safe operation. Energy storage and demand response play an important role in this context by promoting flexible grid operation and low carbon transition. Electric vehicles, beyond serving as mobile energy storage resources, contribute to the grid by offering Vehicle to Grid (V2G) services through optimized charging and discharging scheduling. Additionally, on-board batteries in electric vehicles provide energy storage functions for both home and business users. In comparison to traditional loads, flexible loads can be efficiently managed through demand response to optimize consumption patterns to meet grid needs. Therefore, the collaborative dispatching of multi-modal energy storage integration technologies such as batteries, pumped hydro storage, hydrogen storage, and distributed generators, alongside diverse demand-side flexible resources like flexible loads and electric vehicles, holds significant importance. The coordinated optimization of these distributed resources can effectively address the intermittency of variable renewable energies. VEs encourage the adoption of flexible loads and enhance the overall adaptability and carbon emission reduction efforts of the power system. The main objectives of this Research Topic are: 1. Applying advanced optimization and/or data-driven methods for single joint scheduling of flexibility portfolio; 2. Coordinating flexible storage, generation, load, and EV resources to strengthen system

operation 3 Leveraging coordinated demand flexibility to improve power quality and carbon performance 4 Mitigating impacts of VEs fluctuations through aggregated single multi modal storage and demand response 5 Developing and demonstrating innovative coordination market mechanisms and applications Topics to be covered include but are not limited to 1 Modeling and optimization of single multi modal storage demand systems such as distributed storage electric vehicles and flexible load 2 Technical and economic benefits assessments of coordinated flexibility solutions 3 Planning and real time operation of single joint flexibility resource dispatch 4 Coordination mechanisms and market design for single joint flexibility resource 5 Forecasting approaches for distributed storage electric vehicles and flexible load 6 Cybersecurity and resilience enhancement of single multi flexibility systems 7 Applied research on field testing pilot projects and business models 8 Policy and regulatory frameworks for promoting flexibility resources development 9 Future trends and emerging technologies on storage and demand side integration

Optimization Planning and Operation of Electric Vehicle Charging Facilities

Hengjie Li,Yun Zhou,Donghan Feng,Chen Fang,Nier Wang,2025-08-25 Optimization Planning and Operation of Electric Vehicle Charging Facilities A Perspective from China provides an in depth understanding of core theories and advanced technologies in the field Summarizing the latest research the book introduces achievements in optimizing the planning and operation of electric vehicle charging facilities It is dedicated to the scientific planning and efficient operation of charging stations supporting the sustainable growth of the electric vehicle industry The book also delves into frontier issues such as the interaction between electric vehicles and the power grid and participation modes in the electricity market It highlights the application of existing technologies and includes findings from major projects funded by the National Natural Science Foundation of China the Shanghai Science and Technology Commission and the State Grid Corporation of China Offers a comprehensive and practical guide to the optimized planning and operation of electric vehicle EV charging facilities that is based on experience in China Includes the latest research findings on EV charging infrastructure Covers key topics such as EV charging load modeling and prediction charging facility optimization planning operational optimization charging guidance and path planning EV grid interaction and participation in electricity markets

Transport and Climate Change Maxim A. Dulebenets,Szymon Wiśniewski,Marta Borowska-Stefańska,2025-12-21 This book surveys the impact of the transportation sector on accelerated climate change and the main solutions that have been proposed over the years to address the problem The examples of these solutions include but are not limited to emission reduction targets electrification of the transportation sector elimination of vehicles with traditional fossil fuel engines renewable energy sources and introduction of emission control measures Some of these solutions are quite difficult to implement due to the associated costs Certain approaches may seem rather ambitious and need more thorough assessment Urban areas are substantially impacted by greenhouse gas emissions produced by the transportation sector Global warming and rapid urbanization are all contributing factors that heighten the likelihood of compound extreme weather events As climate change events become more frequent and intense communities around the world become increasingly vulnerable due to their everyday dependence on transportation systems The book presents innovative mitigation and adaptation strategies that reduce the future effects of climate change resulting from the transportation sector and promote adaptive transport systems to minimize human as well as economic losses caused by
