 microcontrollers from Texas Instruments describing various ways of programming them Given the meager peripherals and  
 sensors available on the kit the authors describe the design of Padma a circuit board with a large set of peripherals and  
 sensors that connects to the Tiva Launchpad and exploits the Tiva microcontroller family's on chip features ARM  
 microcontrollers which are classified as 32 bit devices are currently the most popular of all microcontrollers They cover a  
 wide range of applications that extend from traditional 8 bit devices to 32 bit devices Of the various ARM subfamilies Cortex  
 M4 is a middle level microcontroller that lends itself well to data acquisition and control as well as digital signal manipulation  
 applications Given the prominence of ARM microcontrollers it is important that they should be incorporated in academic

curriculums However there is a lack of up to date teaching material textbooks and comprehensive laboratory manuals In this book each of the microcontroller s resources digital input and output timers and counters serial communication channels analog to digital conversion interrupt structure and power management features are addressed in a set of more than 70 experiments to help teach a full semester course on these microcontrollers Beyond these physical interfacing exercises it describes an inexpensive BoB break out board that allows students to learn how to design and build standalone projects as well a number of illustrative projects
