Critical Infrastructure Protection XVII Jason Staggs, Sujeet Shenoi, 2023-12-28 The information infrastructure comprising computers, embedded devices, networks, and software systems is vital to operations in every sector—chemicals, commercial facilities, communications, critical manufacturing, dams, defense, industrial base, emergency services, energy, financial services, food and agriculture, government facilities, healthcare and public health, information technology, nuclear reactors, materials and waste, transportation systems, and water and wastewater systems. Global business and industry governments indeed society itself cannot function if major components of the critical information infrastructure are degraded, disabled, or destroyed. *Critical Infrastructure Protection XVII* describes original research results and innovative applications in the interdisciplinary field of critical infrastructure protection. Also, it highlights the importance of weaving science, technology, and policy in crafting sophisticated yet practical solutions that will help secure information, computer, and network assets in the various critical infrastructure sectors. Areas of coverage include Themes and Issues, Smart Grid Risks and Impacts, Network and Telecommunications Systems Security, Infrastructure Security, Automobile Security. This book is the seventeenth volume in the annual series produced by the International Federation for Information Processing IFIP Working Group 11.10 on Critical Infrastructure Protection, an international community of scientists, engineers, practitioners, and policy makers dedicated to advancing research, development, and implementation efforts focused on infrastructure protection. The book contains a selection of eleven edited papers from the Seventeenth Annual IFIP WG 11.10 International Conference on Critical Infrastructure Protection, which was held at SRI International, Arlington, Virginia, USA, in the spring of 2023. *Critical Infrastructure Protection XVII* is an important resource for researchers, faculty members, and graduate students, as well as for policy makers, practitioners, and other individuals with interests in homeland security.

Impact of digital transformation on business models in the automotive industry Robin Mayer, 2023-06-12 Master's Thesis from the year 2023 in the subject Engineering, Automotive Engineering, grade 1.5, University of Applied Sciences Aalen, language English, abstract: Digital transformation and disruptive business models of new market players create unprecedented uncertainty in the automotive industry. One of the main reasons is the lack of understanding for the need of adapting business models to a changing business environment due to new technologies and shifting customer wants and needs. Even the automotive industry is not spared from digital Darwinism according to which it is not the strongest or most

intelligent of a species that survives but rather the one that adapts best to change What opportunities do OEMs have to transform their business models How can best practices be used to generate new value creation and what influence does the transformation of the business model have on the ecosystem What role will the dealer play in the future and how can he still deliver added value to the OEM This paper provides an in depth insight into the world of automotive sales as well as a detailed analysis of the status quo Best practices based on successful business model transformations of the top tier OEMs are the basis for a deeper understanding and serve other companies as foundation for developing digital business models The goal of this paper is to examine the impact of digital transformation on the dealer business model and how they can continue to deliver value to the OEM For this purpose guided expert interviews are conducted with 16 experts from various areas of the automotive industry Subsequently a qualitative content analysis according to Mayring will be used to assess the challenges and impacts of the agent business model and to develop improvement measures and key topics that offer added value for OEMs The results of this thesis support dealers in understanding their future role in the automotive industry and show design recommendations for a future proof business model

National Center for Supercomputing Applications Access ,1990 Electromagnetic Launching for Affordable Agile Access to Space Rainer Meinke,Hector Guiterrez,Daniel Kirk,2006 The conceptual design of a novel hypersonic electromagnetic launch system has been developed which offers reliable access to space While the concept can be scaled in both mass and launch speed the performed study assumes a 100 kg projectile leaving the launcher at 7 000 m sec The projectile is propelled and levitated by electromagnetic forces inside of a low pressure tube filled with helium at about 10 torr A fully controlled acceleration profile which can be adjusted to meet the requirements of various missions is used to reach 5000 gee in a 500 meter long launch tube A constant flux synchronous motor concept developed under this contract is a breakthrough technology that provides contact free propulsion and self centering suspension with sufficient stiffness and thrust The use of high current persistent mode superconducting coils in the projectile generates high thrust force with near zero heat dissipation No brushes or projectile supplies are needed eliminating contact phenomena The low pressure helium atmosphere inside of the launch tube is proposed which nearly eliminates both aerodynamic and heat transfer effects force torque and heating due to high speed gas flow around the projectile with large safety margins The proposed technology therefore removes several of the technical problems that have made hypersonic electromagnetic launch unfeasible in particular the inductive heating of the projectile when a contact free armature is desired
