History of Nikon Corporation: Nikon Corporation is a multinational corporation established in July of 1917 in Tokyo, Japan. The current headquarters for this renowned entity is located in Shinagawa in Tokyo, Japan, and is believed as of March 2011 to have approximately 25,000 members of staff in its global employ. The corporation, when first established, was a combination of three of Japan's leading optical manufacturers. It was first known as Nippon Kogyo Kabushiki gaisha or Japan Optical Industries Corporation. Name changes followed in 1946 to Nikon and later to the Nikon Corporation in 1988 after the creation and release of its small sized cameras. Intending to dominate the market from its foundation, the corporation initiated the engineering of optical glass in 1918, marketed its MIKRON 4x and 6x binoculars in 1921, and its JOICO microscope shortly thereafter in 1925. The JOICO was the first ever developed telescope by Nikon and bears the name of the company's first initials. In 1932, the brand name NIKKOR was adopted for the cameras' lenses being designed and released globally. The development of cameras followed shortly thereafter with the release of its first small sized camera named the Nikon Model 1 in 1948. The company continued its growth, being listed on the Tokyo and Osaka stock exchanges in 1949 and being lauded by the New York Times for its impressive Nikon cameras and NIKKOR lenses in 1950. This global introduction later resulted in the establishment of a NIKKOR club in 1952 and the Nikon Optical Co. Inc. now using the name Nippon Kogaku U.S.A. Inc. in the United States in 1953. Nikon divisions were later established in Switzerland, the Netherlands, Canada, China, Poland, Thailand, Dubai, Brazil, and the United Kingdom, extending the reach of this innovative company. Since its inception almost a century ago, Nikon continues to revolutionize the field and is now responsible for the production of imaging and optical products globally.

Nikon D7200: A Guide for Beginners
Matthew Hollinder, 2015-05-07
Externally, the new Nikon D7200 camera is purported to be similar to that of its predecessor, the D7100. These similarities according to the reviews refer to the weight, height, and dimensions. Upgrades to the internal processes and features, however, have been enhanced and have been guaranteed to meet the needs of both the avid photographer and the everyday user. The Nikon D7200 has been referred to as the high end APS-C camera of Nikon, being the only DX formatted camera currently available on the market by that company. The D7200 boasts an improved Auto focus system in the form of a multi-CAM 3500DX II 51 point system with sensitivity of up to 3EV. 24.2 MP CMOS sensor, six frames per second of continuous shooting, maximum shutter speed of approximately 1/8000 per second, dual memory card slots, NFC and Wi-Fi capabilities, 3.2 inch LCD display with 1.2M dot, and a metering sensor. This magnesium alloy wrapped device is innovation and creativity being made available to users.

Nikon D810 Jon Sparks, 2015-02-21 Nikon's high end 36MP D800 and D800E DSLRs have been consolidated with the release of the D810 It is not simply an upgrade major changes substantially extend its capabilities and make the camera more attractive to buyers considering a move to a full frame camera Some features from the D4s have been incorporated into the D810 Videographers for example will be pleased with additions to its video feature set Other refinements include a redesigned shutter and mirror mechanism to reduce the shock of shutter actuation which can reduce resolution There's also a new S Raw mode for reduced resolution raw capture

Nikon DF Jon Sparks, 2014-08-20 From the front it resembles an oversized Nikon FM the mechanically operated interchangeable lens 35mm SLR that was produced between 1977 and 1982 In addition to the styling and external controls the Df's other reference to Nikon's history is the retractable meter coupling tab which allows the use of pre 1977 non AI lenses Much of what lies is beneath the Df's decidedly retro skin however will be quite familiar to current users of modern digital SLRs While the e in the name stands for e digitale the e fe stands for e fusione referring to the marriage of old and new Despite its pretensions of being a fully manual camera the Df also features front and rear electronic control dials in addition to the physical dials on the top plate The Df is built around the 16MP full frame sensor from the company's flagship D4 and uses the processor and AF system from the cheaper D610 model The optical viewfinder is very large the

magnification is 0.70x and the coverage 100%. When a DX lens is attached to the Df the viewfinder shows frame lines indicating the DX image area. Most notably and unusual for a modern DSLR although the camera is based on a video capable sensor the Df cannot shoot video. This according to the developers is because the Nikon Df is intended to be a serious camera for people who want to produce pure photography. UK author Jon Sparks provides practical tips on how to get the best from this versatile camera in this comprehensive step by step guide that includes a pullout quick reference card. **David Busch's Nikon D7100 Guide to Digital SLR Photography** David D.
