Intelligence in Civil and Structural Engineering B.H. Topping, 1992-09-30 These volumes comprise the edited versions of the principal lectures and selected papers presented at the NATO Advanced Study Institute on Optimization and Decision Support Systems in Civil Engineering. The Institute was held in the Department of Civil Engineering at Heriot Watt University Edinburgh United Kingdom from June 25th to July 6th 1989. Both volumes reflect the full range of the systems approach to civil and structural engineering problems including structural analysis and design, water resources engineering, geotechnical engineering, transportation and environmental engineering. This systems approach discussed in the first volume includes a number of common threads: mathematical programming, game theory, utility theory, statistical decision theory, networks and fuzzy logic. A most important feature of this volume is the examination of similar representations of different civil engineering problems and their solutions using general systems approaches. The decision support aspect of the institute is reflected in the second volume by the knowledge based systems and their artificial intelligence approach. Papers discussing many aspects of knowledge based systems in civil and structural engineering are included in the second volume. **Optimization and Artificial Intelligence in Civil and Structural Engineering**

Water Distribution System

Optimization Johannes Gessler,Thomas M. Walski,U.S. Army Engineer Waterways Experiment Station,1985 This report describes the development of a computer program WADISO Water Distribution Systems Optimization which can be used to optimally size pipes in water distribution systems and select optimal pipes for cleaning and lining The program can also be used as a steady state simulation program to calculate flows and pressures in pipe networks The simulation portion of the program uses the node method with sparse matrix techniques to reduce computations The optimization portion uses a bounded enumeration technique based on minimizing the sum of pipe installation pipe cleaning and lining and present worth of pumping energy costs Only discrete commercially available pipe sizes are considered The program can handle any typical

water distribution system and includes pumps pressure reducing valves multiple pressure zones and check valves To use the optimization the user must also specify costs as a function of pipe diameter or use default costs in the program minimum pressures up to five water use loadings a list of which pipes are to be sized and a range of sizes to be considered The program user s guide is included as an appendix to the report Other appendices address how to access the program how to obtain detailed documentation the nature of pipe sizing existing literature on pipe optimization and a discussion of the relationship of pipe sizing and water distribution performance criteria Keywords Optimization Pipe flow Pipe networks Pipe sizing Water conveyance Water distribution **ASCE Manuals and Reports on Engineering Practice ,1962**
