Optimization Techniques With Applications To Aerospace Systems:

Optimization Techniques George Leitmann, 1962-01-01 During the past decade there has been a remarkable growth of interest in problems of systems optimization and of optimal control And with this interest has come an increasing need for methods useful for rendering systems optimum Rising to meet this challenge there have sprung up various schools often championing one method and regarding it superior to all others Long experience has shown that life is not so simple that the picture is not all white and black In short one may expect that a particular method is superior to others for the solution of some problems rarely for all problems Furthermore since the basic mathematical formulation of optimization problems is often essentially the same in many approaches it is not unreasonable to expect that there may be a great deal of similarity among various methods a similarity often indeed an identity which is obscured by dissimilarities in language and notation To help the uncommitted in his search for and choice of the optimum optimization technique is the fundamental aim of this volume To accomplish this aim there are assembled in one book ten chapters dealing on the other hand each chapter can be read as a separate entity setting forth the technique championed by a particular School While each of the ten chapters dealing with methods includes simple examples primarily for didactic purposes it has been thought useful to present four additional chapters dealing with applications alone Of these the first three Chapters 11 13 cover specific optimization problems and the final chapter contains a discussion of problems in the optimization of a complete system in this case a nuclear propulsion system
