## FLUID MECHANICS

### FLUID

Fluid can flow (continuous plastic deformation)

Fluid is a substance that can deform continuously, under the action of tangential force (shear stress) no matter how small the tangential force is.

That means fluid cannot support under static condition.

In fluid rate deformation is far more important than total deformation because fluid continues to deform as long as external shear force is applied.

$\frac{du}{dy}$  - Rate of Shear strain

SOLID:

Total deformation
