Salvadori's Structure in Architecture Robert A. Heller, Deborah J. Oakley, 2019 **Salvadori's Structure in Architecture** Mario Salvadori, Robert A. Heller, Deborah Oakley, 2016-01-12 An excellent text as a first introduction to structures geared toward architecture students or as a companion for more traditional engineering math based courses including statics and strength of materials or structural principles. This conceptual non mathematical yet technical look at the principles of structural mechanics and the physical properties of building elements makes structural mechanics for architecture accessible to all. Continuing Dr. Salvadori's passion for education and an accessible non mathematical presentation of structural mechanics, *Salvadori's Structure in Architecture: The Building of Buildings* 4e is a must have for students of architecture and building construction, structural engineers and all those with an interest in architecture. It has been revised and expanded to include over 500 new illustrations, 150 new photos and new materials covering the changes in technology and construction techniques developed during the last 50 years. Now presented in three manageable sections covering the fundamental concepts. Section 1 structural forms, Section 2 and topics beyond the basics, Section 3 it provides expanded content and graphics on critical topics such as beam behavior, moment of inertia, redundancy and much more.

Structure in Architecture Mario Salvadori, Robert A. Heller, 1975 [How to Write a Historic Structure Report](#) David Arbogast, 2014-01-09 A one of a kind step by step guide to compiling an HSR, a document crucial to every professional working on a historic property. Any architect, engineer or preservation professional renovating a historic property must be familiar with the historic structure report (HSR), a document that evaluates all aspects of a property to minimize damage during restoration. The only book of its kind, this practical guide walks readers through the process of compiling an HSR. From gathering historical and archival data about the property to analyzing its structural, mechanical and electrical components to assessing the state of its interior finish including wood, masonry and metals, this book covers all the nuts and bolts of an expertly written informative HSR. Explaining what information should be included in each section and how investigators can work together effectively as a team to produce a comprehensive, coherent report, this handbook is one no professional should be without.

Structures in Architecture Education Prabhjot Singh Sugga, 2024-01-02 There has been a historical discord over curriculum and teaching practices for structures courses in architectural education as students are disinterested and not able to integrate learnings from such courses into their design solutions. The research in the book *Structures in Architecture Education: Teaching and Integrating in Design* involves the development of an assessment tool by a comparative analysis of past frameworks to understand integration that assesses three dimensions of integration of structures performance: physical and visual against three building systems: exterior, interior and services. Around 27-30 samples are selected for each year from first to fourth from three institutions. Data for pedagogy and curriculum are also collected that is used to analyse the results from assessment of samples. In the second part of this book, structural equation

modelling is used to analyse if the studio is the preferred mode of learning structures

Structure and Architecture
Angus J Macdonald, 2007-06-07 Structure and Architecture is an essential textbook for students and practitioners of architecture and structural engineering. MacDonald explains the basic principles of structure and describes the ranges of structure types in current use. Furthermore the book links these topics directly with the activity of architectural design and criticism. An update of the first edition Structure and Architecture 2ed includes a revised opening chapter and a new section that discusses prominent buildings constructed since the last edition was published in 1994. Angus MacDonald deals with structures holistically relating detailed topics back to the whole structure and building. He aims to answer the questions: What are architectural structures? How does one define the difference between the structure of a building and all of the other components and elements of which it consists? What are the requirements of structures? What is involved in their design? An understanding of the concepts involved in answering these questions and an appreciation of how the structure of a building functions enhances the ability of an individual to appreciate its architectural quality. This book is unique in that it discusses the structural component of architectural design in the context of visual and stylistic issues

The

Tectonics of Structural Systems Yonca Hurol, 2015-09-16 The Tectonics of Structural Systems provides an architectural approach to the theory of structural systems. The book combines structural recommendations to follow during the architectural design of various structural systems and the tectonic treatment of structural recommendations in architecture. Written expressly for students the book makes structures understandable and useful providing practical and useful knowledge about structures a design based approach to the subject of structures and a bridge in the gap between structures and the theory of design. Good architectural examples for each structural system are given in order to demonstrate that tectonics can be achieved by applying technical knowledge about structures. Over 300 illustrations visually unpack the topics being explained making the book ideal for the visual learner
