Papathanasiou, Emmanouil Stiakakis, 2012-11-28 These proceedings consist of 30 selected research papers based on results presented at the 10th Balkan Conference 1st International Symposium on Operational Research BALCOR 2011 held in Thessaloniki Greece September 22-24 2011 BALCOR is an established biennial conference attended by a large number of faculty researchers and students from the Balkan countries but also from other European and Mediterranean countries as well Over the past decade the BALCOR conference has facilitated the exchange of scientific and technical information on the subject of Operations Research and related fields such as Mathematical Programming Game Theory Multiple Criteria Decision Analysis Information Systems Data Mining and more in order to promote international scientific cooperation The carefully selected and refereed papers present important recent developments and modern applications and will serve as excellent reference for students researchers and practitioners in these disciplines *Operations Research Applications in Health Care Management* Cengiz Kahraman, Y. Ilker Topcu, 2017-12-08 This book offers a comprehensive reference guide to operations research theory and applications in health care systems It provides readers with all the necessary tools for solving health care problems The respective chapters written by prominent researchers explain a wealth of both basic and advanced concepts of operations research for the management of operating rooms intensive care units supply chain emergency medical service human resources lean health care and procurement To foster a better understanding the chapters include relevant examples or case studies Taken together they form an excellent reference guide for researchers lecturers and postgraduate students pursuing research on health care management problems The book presents a dynamic snapshot on the field that is expected to stimulate new directions and stimulate new ideas and developments *Complementarity: Applications,*

Algorithms and Extensions Michael C. Ferris, Olvi L. Mangasarian, Jong-Shi Pang, 2013-03-09 This volume presents state of the art complementarity applications algorithms extensions and theory in the form of eighteen papers These at the International Conference on Complementarity 99 ICCP99 held in Madison Wisconsin during June 9-12 1999 with support from the National Science Foundation under Grant DMS 9970102 Complementarity is becoming more widely used in a variety of application areas In this volume there are papers studying the impact of complementarity in such diverse fields as deregulation of electricity markets engineering mechanics optimal control and asset pricing Further more

application of complementarity and optimization ideas to related problems in the burgeoning fields of machine learning and data mining are also covered in a series of three articles In order to effectively process the complementarity problems that arise in such applications various algorithmic theoretical and computational extensions are covered in this volume Nonsmooth analysis has an important role to play in this area as can be seen from articles using these tools to develop Newton and path following methods for constrained nonlinear systems and complementarity problems Convergence issues are covered in the context of active set methods global algorithms for pseudomonotone variational inequalities successive convex relaxation and proximal point algorithms Theoretical contributions to the connectedness of solution sets and constraint qualifications in the growing area of mathematical programs with equilibrium constraints are also presented A relaxation approach is given for solving such problems Finally computational issues related to preprocessing mixed complementarity problems are addressed
