neuroendocrinological research proves that people are rational. They just have a different biological perception of the same stimulus. Their preferences, behavior, and decisions are strongly influenced by the hundreds of millions of sensors monitoring their body and brain. People with more taste buds are, for example, sensitive to bitterness and are more likely to drink their coffee with sugar or milk or to drink tea. This book helps product managers, marketers, and corporate decision makers understand and predict customers' behavior and preferences. It provides the tools to design the right sensory mix: color, shape, depth, taste, smell, texture, and sound for each product and fine tune their positioning and range for every local market. Using cases from different sectors, the author shows that this approach delivers planet and people friendly innovations which have a higher chance of success in the market. **Management** Christopher P. Neck, Jeffery D. Houghton, Emma L. Murray, 2024-12-10

Management Fourth Edition introduces students to the planning, organizing, leading, and controlling functions of management with an emphasis on how managers can cultivate an entrepreneurial mindset. The text includes 34 case studies profiling a wide range of companies including The Progressive Corporation, Catch Release, and Sephora. Authors Christopher P. Neck, Jeffery D. Houghton, and Emma L. Murray use a variety of examples, applications, and insights from real world managers to help students develop the knowledge, mindset, and skills they need to succeed in today's fast-paced dynamic workplace.

Reviewing the Critics Ben Gifford, Cleveland State University. School of Communication, OhioLINK Electronic Theses and Dissertations Center, 2013. Abstract: The purpose of this study is to evaluate the current critical climate in popular online video game reviews i.e. video game criticism written for a general audience. So far most of the research published in this area focuses on how the reviews reflect the games themselves rather than strictly examining the content of the reviews in this growing body of literature. This study uses computer aided text analysis (CAT) supplemented with human coding to identify typological differences between film and video game reviews as well as differences in theory, usage and critical thought and style. Video game reviews are more concerned with the price of the work being reviewed supporting the notion for a utility theory of video games. Game reviewers also tend to find redeeming qualities even in very flawed games suggesting they are either overly passionate and/or concerned about keeping advertisers happy. Although not at the exceedingly high levels as previous studies, the author finds support for using usability heuristics e.g. responsiveness of controls, use of in-game tutorials to review games. Neither body of popular criticism examined delves deeply into theoretical frameworks for auteur or feminist theories but discussion is provided as to how the reviewers could address these issues should they choose to do so.
