Wireless Virtualization Heming Wen, Prabhat Kumar Tiwary, Tho Le-Ngoc, 2013-08-28 This SpringerBriefs is an overview of the emerging field of wireless access and mobile network virtualization. It provides a clear and relevant picture of the current virtualization trends in wireless technologies by summarizing and comparing different architectures, techniques and technologies applicable to a future virtualized wireless network infrastructure. The readers are exposed to a short walkthrough of the future Internet initiative and network virtualization technologies in order to understand the potential role of wireless virtualization in the broader context of next generation ubiquitous networks. Three main wireless virtualization perspectives are explored along with the potential challenges and requirements of a sustainable wireless virtualization framework. Finally, it presents an example of a multi-perspective wireless virtualization framework. The readers learn the latest concepts in the application of wireless virtualization as well as its relationship with cutting edge wireless technologies such as software defined radio (SDR) and cognitive radio.

Advances in Communications, Computing, Networks and Security Volume 8 Paul Dowland, Steven Furnell, 2012-06-14 This book is the eighth in a series presenting research papers arising from MSc/MRes research projects undertaken by students of the School of Computing and Mathematics at Plymouth University. The publications in this volume are based upon research projects that were undertaken during the 2009/10 academic year. A total of 30 papers are presented covering many aspects of modern networking and communication technology including security, mobility, coding schemes and quality measurement. The expanded topic coverage compared to earlier volumes in this series reflects the broadening of our range of MSc programmes. Specifically contributing programmes are Communications Engineering and Signal Processing, Computer and Information Security, Computer Science, Network Systems Engineering, Robotics and Web Applications Development.

Delivering Digital Services David McMenemy, Alan Poulter, 2005 Lifelong learning is currently a major concern of governments who wish to see their citizens remain employable while the job market changes. Critical to this are digital learning centres where learning is delivered through internet access or via CD-based packages. Access to these turns public libraries and community networks into multi-media neighbourhood superstores where print-based learning materials are enhanced by multimedia. The multiplicity of sources of learning materials and experiences reinforces and extends the traditional role of the librarian as mediator between the user and their needs. To support and foster these activities, frontline public library and community network staff must be capable of offering user support and advice in a much wider arena. This requires training in new knowledge and skill sets. This timely new book offers practical guidance and expertise for public library and community network staff in setting up, running and developing an effective digital learning centre based within the People's Network or in a related community networking initiative. It has a holistic focus on the use of ICT, taking staff beyond user training applications into areas of network management, e-learning, digitization, web design and XML that staff face on a day-to-day basis. Key areas covered include PC installation and
