Metaverse Peter Hoffmann, 2025-11-07 The development of the Internet particularly the World Wide Web is currently reaching its limits both technically and in socio cultural and economic terms As a solution a new form of the Internet is being promised one that aims to overcome the boundaries between the real and virtual worlds and merge reality with digitality the metaverse Technical semantic and organizational aspects are closely intertwined in this vision But what does this mean upon closer examination What technological and engineering challenges must be overcome to enable such a fusion What economic opportunities arise and which ones might be off limits How can we ensure the creation of an open and universally accessible metaverse And how can we prevent a scenario in which a few large providers impose their proprietary visions on this new space This book aims to provide answers to these questions In the current edition recent trends and the role of artificial intelligence in the metaverse have also been added

Infrastructures of Reality: Metaverse Stories, Spaces, Bodies Chris Hesselbein, Paolo Bory, 2025-08-09 This open access book focuses on two dimensions of the development of the metaverse that are crucial to reality namely spatiality and embodiment Metaversal technologies are thought to fundamentally affect both our spaces and bodies which are two central aspects of the constitution of social reality Both spatiality and embodiment are core elements of world making that are being pulled into the ambit of metaversal projects On the one hand metaversal technologies are profoundly spatial in the sense that they render space in virtual form or overlay digital layers onto pre existing physical spaces On the other hand metaversal technologies are directly geared towards the body in that they not only seek to extend or expand our embodied senses and emplace our bodies in virtual spaces but they also seek to capture their behaviours and actions on a far more granular level This can create new opportunities in terms of work social interaction and leisure but can

also open our bodies up to new tech driven interventions and control Whether in the form of VR or AR such technologies not only reproduce space but also rely on making spaces more legible and open to automated interventions Taken together the metaversification of spaces and bodies gives rise to crucial questions about the goals and implications of metaversal developments by large technology companies and about the relationship between the developments of the metaverse and AI systems Drawing on our combined background and expertise in Science and Technology Studies and the History of Media and Communication we critically analyse the development of metaversal technologies and platforms by discussing a broad set of developments and examples from a wide range of technology and gaming companies Written in clear concise and accessible language and combining and applying novel theoretical frameworks and concepts to a currently emergent phenomenon this book will find a large audience not only within academic and professional circles but also in popular culture

Next Generation Internet Peter Hoffmann,2025-01-07 The development of the internet particularly the World Wide Web is currently hitting its limits both technically and socio culturally as well as economically A new internet is promised as a solution one that aims to overcome the boundaries between the real and the virtual world merging reality and digitality the metaverse Technical semantic and organizational details are closely intertwined in this context But what does this mean upon closer examination What technical and technological challenges must be overcome to achieve such a merging What economic opportunities arise and which ones may be precluded How can we ensure that an open and universally accessible metaverse is created And how can we prevent a few large providers from imposing their proprietary ideas in this new metaverse This book aims to provide answers to these questions
