Beginning Android Tablet Programming Robbie Matthews, 2012-02-01 *Beginning Android Tablet Programming* starts off by showing how to get your system ready for Android tablet programming. You won't need any previous Android experience because you'll learn all about the basic structure of an Android program and how the Android operating system works, and then you'll learn how to write your first Android tablet application from scratch. *Beginning Android Tablet Programming* then equips you to build a set of interesting and fully working Android tablet applications. These projects will give you the inspiration and insights to build your own Android programs in the future. You'll be introduced to 2D programming, and you'll see what you can do with a touch screen interface and the Honeycomb SDK. Of course, 3D programming is even more alluring for many programmers. If that includes you, you'll learn about how Honeycomb has changed the game for Android graphics programming and get your first taste of 3D programming on an Android tablet. Lights, camera, action! You'll learn along the way how Android Honeycomb gives you access through your programming to all those interesting sensors that tablet computers are equipped with today, beyond the touch screen itself. You'll learn, for example, how you can use a tablet GPS sensor to locate your car. You'll also discover how you can access files on your tablet or on the web through programming, and then build on that insight to create your own file browser application. This Android project contains many useful coding techniques appropriate for many situations you might encounter in your future programming. Android tablet applications you'll be glad to have them under your belt. So do you want to write programs that can receive and send reminder messages via SMS? Do you want to write your first 2D or 3D game on Android? Perhaps you'd like to write an application that sorts out all your contacts for you. *Beginning Android Tablet Programming* introduces you to Android tablet programming and shows how you can program your Android tablet from scratch to do what you want.

You'll learn about testing, creating clean architecture and persisting data as well as exploring the dependency injection pattern and learning how to publish your apps on the Google Play Store. You'll also work on realistic projects split up into bite-size exercises and activities along with building apps to create quizzes, read news articles, check weather reports, store recipes, retrieve movie information and remind you where you parked your car. By the end of this book, you'll have gained the skills and confidence to build your own creative Android apps using Kotlin.

What you will learn:

- Create maintainable and scalable apps using Kotlin.
- Grasp Android asynchronous programming with coroutines and the Flow API.
- Simplify app development with Google architecture components.
- Apply MVVM and Repository architecture patterns to standardize retrieving and displaying data from outside sources.
- Increase app stability and robustness with unit and integration tests.
- Use standard libraries for dependency injection, networking, data parsing and persistence.
- Publish your app on the Google Play Store.

Who this book is for: This book is for beginners as well as intermediate-level developers with no prior experience in Android app development. Basic knowledge of the Kotlin programming language or experience in a similar programming language along with a willingness to brush up on Kotlin is required.

Spying Software Development in Google Android Fisssha Seyoum Teshome, 2017-06-28 Bachelor Thesis from the year 2011 in the subject Computer Science IT Security Helsinki Metropolia University of Applied Sciences language English abstract

The main purpose was to study the concept behind developing spying software. The goal of this project was to develop a mobile phone tracking application for Google Android phones. The application was expected to include the use of GPS and Cell ID to track the location of a mobile phone. The Google Android SDK was used to develop the tracking software application. The application was tested on a Google Android mobile phone. The result showed that the development process of location and maps-based applications was fast while using Google Android. This was because of two main reasons: First, Google Android provided APIs for location-based services such as GPS and Cell ID. Second, having Eclipse with ADT plug-in as the choice to develop the application led to an easy means of debugging and testing. The tracking application was found important to use since it will allow users to trace lost phones or to locate lost people. The application can be developed further by adding a number of features to it, such as running in the background, SMS copying and making a spy call.
