**Business Week** ,2010 Measuring Prices and Price Competition Online

Austan Goolsbee,Judith A. Chevalier,2002 Despite the interest in measuring price sensitivity of online consumers most academic work on Internet commerce is hindered by a lack of data on quantity In this paper we use publicly available data on the sales ranks of about 20 000 books to derive quantity proxies at the two leading online booksellers Matching this information to prices we can directly estimate the elasticities of demand facing both merchants as well as create a consumer price index for online books The results show significant price sensitivity at both merchants but demand at Barnes and Noble is much more price elastic than is demand at Amazon The data also allow us to estimate the magnitude of retail outlet substitution bias in the CPI due to the rise of Internet sales The estimates suggest that prices online are much more variable than the CPI which understates inflation by more than double in one period and gets the sign wrong in another
