**Feedback Control of Large Scale Systems** Jan Lunze, 1992

Presents the basic methods of feedback control in large scale systems showing how multivariable feedback theory has to be extended to solve analysis and design tasks for interconnected systems The book presents theories which it then assesses in terms of actual engineering results

Multivariable Feedback: A Quasi-Classical Approach Y. S. Hung, A. G. J. MacFarlane, 1982 The purpose of the work presented here is the development of a computer aided analysis design approach to linear multivariable feedback systems having the following attributes In specifying a required feedback control system behaviour the designer will be principally concerned with three aspects of his specification stability performance and robustness By robustness is meant the ability to maintain some specified degree of stability and performance in the face of a stipulated amount of plant variation Stability can be handled using the generalized Nyquist stability criterion and the associated generalized root locus method However although generalized Nyquist diagrams give precise information about closed loop stability they do not give an adequate characterization of closed loop performance The feedback control design problem is considered here in the context of computer aided design CAD using interactive graphic terminals and appropriate

programs have been developed and tested for the techniques described
