Technologies related to electronic music production Aaron Sequeira, 2023-06-29 We will focus on the most outstanding technologies for modern electronic music production. Therefore, as in the previous book in which sections made the presentation of the instruments, this volume is made up of five of them for reasons of analytical practicality: 1 Audio recording and playback, 2 Speakers, 3 Communication protocols between electronic instruments, 4 Modern electronic music production, 5 DJing. The first point will clarify how the ability to record sound in an analog mechanism was acquired just a moment ago if we compare that time with human existence. Therefore, since electronic music is intrinsically linked to the technique of sound recording and its playback, it is necessary to know about the technologies that have allowed this process since the 19th century. Subsequently, it will be explained what the speakers are and how their role and development in electronic music have been fundamental. As has already been elucidated throughout this series, it would be practically impossible for electronic music to exist without speakers. After that, we will see the two main protocols of communication.
