**On Optimization in Computer Aided Architectural Design** Antony D. Radford,John S. Gero,1980 This report examines the role of computers in the provision of information for architectural design decision making and compares the potential contributions of simulation generation and optimization techniques It argues that optimization models are particularly well suited to the provision of design information because they produce results which are prescriptive express design options and address the problems of the stability and sensitivity of solutions to change over time The difficulties posed by the multiple objectives which characterize architectural design problems are discussed and some solution approaches are described The report concludes that optimization concepts offer a powerful approach to design decision making and warrant much more research activity in the development of techniques and models for application in architecture **Books in Print**

**Programming** Tadeusz Trzaskalik,Jerzy Michnik,2013-06-05 The book is dedicated to multi objective methods in decision making The first part which is devoted to theoretical aspects covers a broad range of multi objective methods such as multiple linear programming vector optimisation fuzzy goal programming data envelopment analysis game theory and dynamic programming The reader who is interested in practical applications will find in the remaining parts a variety of approaches applied in numerous fields including production planning logistics marketing and finance *Multiobjective Optimization: Behavioral and Computational Considerations* Jeffrey L. Ringuest,2012-12-06 Throughout the development of mathematical programming researchers have paid great attention to problems that are described by a single objective that can only be achieved subject to satisfying a set of restrictions or constraints Recently it has been recognized that the use of a single objective limits the applicability of In reality many multiobjective mathematical programming models situations exist and frequently these mUltiple objectives are in direct conflict Research on multiobjective problems can be broken down into two broad categories multiobjective optimization and multicriterion decision theory Multiobjective optimization models are based on techniques such as linear programming In general the multiobjective optimization problem can be defined as finding a feasible alternative that yields the most preferred set of values for the objective functions This problem differs from a single objective because subjective methods are required to determine which alternative is most preferred A body of literature parallel to that m multiobjective optimization has been developing in the area of multicriterion decision theory These models are based on classical decision analysis particularly utility theory One focus of this research has been the development and testing of procedures for estimating multiattribute utility functions that are consistent with rational decision maker behavior A utility function provides a model of a decision maker s choice among alternatives This literature is directly xii MULTIOBJECTIVE OPTIMIZATION applicable to multiobjective optimization and provides much needed insight into the subjective character of that problem
