Smart Power Grids 2011 Ali Keyhani,Mohammad Albaijat,2012-01-12 Electric power systems are experiencing significant changes at the worldwide scale in order to become cleaner smarter and more reliable This edited book examines a wide range of topics related to these changes which are primarily caused by the introduction of information technologies renewable energy penetration digitalized equipment new operational strategies and so forth The emphasis will be put on the modeling and control of smart grid systems The book addresses research topics such as high efficiency transforrmers wind turbines and generators fuel cells or high speed turbines and generators

**Electric Vehicle Systems Architecture and Standardization Needs** Beate Müller,Gereon Meyer,2015-02-25 This edited volume presents research results of the PPP European Green Vehicle Initiative EGV1 focusing on Electric Vehicle Systems Architecture and Standardization Needs The objectives of energy efficiency and zero emissions in road transportation imply a paradigm shift in the concept of the automobile regarding design materials and propulsion technology A redesign of the electric and electronic architecture provides in many aspects additional potential for reaching these goals At the same time standardization within a broad range of features components and systems is a key enabling factor for a successful market entry of the electric vehicle EV It would lower production cost increase interoperability and compatibilities and sustain market penetration Hence novel architectures and testing concepts and standardization approaches for the EV have been the topic of an expert workshop of the European Green Vehicles Initiative PPP This book contains the contributions of current European research projects on EV architecture and an expert view on the status of EV standardization The target audience primarily comprises researchers and experts in the field

and Southeast Asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants In order to mitigate the issues arising from conventional internal combustion engine powered vehicles there has been a considerable acceleration in the adoption of electric vehicles EVs Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimalized by smart microgrids As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment Practical issues such as fleet management coordinated operation repurposing of batteries and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure This book explores such a perspective with contributions from leading experts on planning analysis optimization and management of electrified transportation and the transportation infrastructure The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry business and consumer applications We expect the book to serve as a reference for a larger audience including power system architects practitioners developers new researchers and graduate level students especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia
